Davies, James Welch, 2022-09-01 To be effective data intensive systems require extensive ongoing customisation to reflect changing user requirements organisational policies and the structure and interpretation of the data they hold Manual customisation is expensive time consuming and error prone In large complex systems the value of the data can be such that exhaustive testing is necessary before any new feature can be added to the existing design In most cases the precise details of requirements policies and data will change during the lifetime of the system forcing a choice between expensive modification and continued operation with an inefficient design Engineering Agile Big Data Systems outlines an approach to dealing with these problems in software and data engineering describing a methodology for aligning these processes

throughout product lifecycles It discusses tools which can be used to achieve these goals and in a number of case studies shows how the tools and methodology have been used to improve a variety of academic and business systems Handbook of Research on Cloud Computing and Big Data Applications in IoT Gupta, B. B.,Agrawal, Dharma P.,2019-04-12 Today cloud computing big data and the internet of things IoT are becoming indubitable parts of modern information and communication systems They cover not only information and communication technology but also all types of systems in society including within the realms of business finance industry manufacturing and management Therefore it is critical to remain up to date on the latest advancements and applications as well as current issues and challenges The Handbook of Research on Cloud Computing and Big Data Applications in IoT is a pivotal reference source that provides relevant theoretical frameworks and the latest empirical research findings on principles challenges and applications of cloud computing big data and IoT While highlighting topics such as fog computing language interaction and scheduling algorithms this publication is ideally designed for software developers computer engineers scientists professionals academicians researchers and students **Advanced Informatics for Computing Research** Ashish Kumar Luhach,Dharm Singh Jat,Kamarul Bin Ghazali Hawari,Xiao-Zhi Gao,Pawan Lingras,2019-09-16 This two volume set CCIS 1075 and CCIS 1076 constitutes the refereed proceedings of the Third International Conference on Advanced Informatics for Computing Research ICAICR 2019 held in Shimla India in June 2019 The 78 revised full papers presented were carefully reviewed and selected from 382 submissions The papers are organized in topical sections on computing methodologies hardware information systems networks software and its engineering **Knowledge Management in the Development of Data-Intensive Systems** Ivan Mistrik,Matthias Galster,Bruce R. Maxim,Bedir Tekinerdogan,2021-06-15 Data intensive systems are software applications that process and generate Big Data Data intensive systems support the use of large amounts of data strategically and efficiently to provide intelligence For example examining industrial sensor data or business process data can enhance production guide proactive improvements of development processes or optimize supply chain systems Designing data intensive software systems is difficult because distribution of knowledge across stakeholders creates a symmetry of ignorance because a shared vision of the future requires the development of new knowledge that extends and synthesizes existing knowledge Knowledge Management in the Development of Data Intensive Systems addresses new challenges arising from knowledge management in the development of data intensive software systems These challenges concern requirements architectural design detailed design implementation and maintenance The book covers the current state and future directions of knowledge management in development of data intensive software systems The book features both academic and industrial contributions which discuss the role software engineering can play for addressing challenges that confront developing maintaining and evolving systems data intensive software systems of cloud and mobile services and the scalability requirements they imply The book features software engineering approaches that can efficiently deal with data intensive systems as well as applications and

use cases benefiting from data intensive systems Providing a comprehensive reference on the notion of data intensive systems from a technical and non technical perspective the book focuses uniquely on software engineering and knowledge management in the design and maintenance of data intensive systems The book covers constructing deploying and maintaining high quality software products and software engineering in and for dynamic and flexible environments This book provides a holistic guide for those who need to understand the impact of variability on all aspects of the software life cycle It leverages practical experience and evidence to look ahead at the challenges faced by organizations in a fast moving world with increasingly fast changing customer requirements and expectations
