Linear Models and Time-Series Analysis Marc S. Paoletta, 2018-10-10 A comprehensive and timely edition on an emerging new trend in time series Linear Models and Time Series Analysis Regression ANOVA ARMA and GARCH sets a strong foundation in terms of distribution theory for the linear model regression and ANOVA univariate time series analysis ARMAX and GARCH and some multivariate models associated primarily with modeling financial asset returns copula based structures and the discrete mixed normal and Laplace It builds on the author's previous book Fundamental Statistical Inference A Computational Approach which introduced the major concepts of statistical inference Attention is explicitly paid to application and numeric computation with examples of Matlab code throughout The code offers a framework for

discussion and illustration of numerics and shows the mapping from theory to computation The topic of time series analysis is on firm footing with numerous textbooks and research journals dedicated to it With respect to the subject technology many chapters in Linear Models and Time Series Analysis cover firmly entrenched topics regression and ARMA Several others are dedicated to very modern methods as used in empirical finance asset pricing risk management and portfolio optimization in order to address the severe change in performance of many pension funds and changes in how fund managers work Covers traditional time series analysis with new guidelines Provides access to cutting edge topics that are at the forefront of financial econometrics and industry Includes latest developments and topics such as financial returns data notably also in a multivariate context Written by a leading expert in time series analysis Extensively classroom tested Includes a tutorial on SAS Supplemented with a companion website containing numerous Matlab programs Solutions to most exercises are provided in the book Linear Models and Time Series Analysis Regression ANOVA ARMA and GARCH is suitable for advanced masters students in statistics and quantitative finance as well as doctoral students in economics and finance It is also useful for quantitative financial practitioners in large financial institutions and smaller finance outlets Forecasting Financial Time Series Using Model Averaging Francesco Ravazzolo, 2007 Believing in a single model may be dangerous and addressing model uncertainty by averaging different models in making forecasts may be very beneficial In this thesis we focus on forecasting financial time series using model averaging schemes as a way to produce optimal forecasts We derive and discuss in simulation exercises and empirical applications model averaging techniques that can reproduce stylized facts of financial time series such as low predictability and time varying patterns We emphasize that model averaging is not a magic methodology which solves a priori problems of poorly forecasting Averaging techniques have an essential requirement individual models have to fit data In the first section we provide a general outline of the thesis and its contributions to previous research In Chapter 2 we focus on the use of time varying model weight combinations In Chapter 3 we extend the analysis in the previous chapter to a new Bayesian averaging scheme that models structural instability carefully In Chapter 4 we focus on forecasting the term structure of U S interest rates In Chapter 5 we attempt to shed more light on forecasting performance of stochastic day ahead price models We examine six stochastic price models to forecast day ahead prices of the two most active power exchanges in the world the Nordic Power Exchange and the Amsterdam Power Exchange Three of these forecasting models include weather forecasts To sum up the research finds an increase of forecasting power of financial time series when parameter uncertainty model uncertainty and optimal decision making are included
