ETAPS2000 was the third instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprised the conferences FOSSACS FASE ESOP CC TACAS and satellite workshops CBS CMCS CoFI GRATRA INT seven invited lectures a panel discussion and ten tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive ETAPS is a loose confederation in which each event retains its own identity with a separate program committee and independent proceedings Its format is open ended allowing it to grow and evolve as time goes by Contributed talks and system demonstrations are in synchronized parallel sessions with invited lectures in plenary sessions Two of the invited lectures are reserved for unifying talks on topics of interest to the whole range of ETAPS attendees

*Graph Transformation* Andrea Corradini, Hartmut Ehrig, Hans-Jörg Kreowski, Grzegorz Rozenberg, 2003-06-30 ICGT 2002 was the first International Conference on Graph Transformation following a series of six international workshops on graph grammars with applications in computer science held in Bad Honnef 1978 Osnabrück 1982 Warrenton 1986 Bremen 1990 Williamsburg 1994 and Paderborn 1998 ICGT 2002 was held in Barcelona Spain October 7-12 2002 under the auspices of the European Association of Theoretical Computer Science EATCS the European Association of Software Science and Technology EASST and the IFIP Working Group 1.3 Foundations of Systems Specification The scope of the conference concerned graphical structures of various kinds like graphs diagrams visual sentences and others that are useful to describe complex

structures and systems in a direct and intuitive way These structures are often augmented by formalisms which add to the static description a further dimension allowing for the modeling of the evolution of systems via all kinds of transformations of such graphical structures The field of Graph Transformation is concerned with the theory applications and implementation issues of such formalisms The theory is strongly related to areas such as graph theory and graph algorithms formal language and parsing theory the theory of concurrent and distributed systems formal specification and verification logic and semantics

**Processes, Terms and Cycles: Steps on the Road to Infinity** Aart Middeldorp, 2005-12-13 This Festschrift is dedicated to Jan Willem Klop on the occasion of his 60th birthday The volume comprises a total of 23 scientific papers by close friends and colleagues written specifically for this book The papers are different in nature some report on new research others have the character of a survey and again others are mainly expository Every contribution has been thoroughly refereed at least twice In many cases the first round of referee reports led to significant revision of the original paper which was again reviewed The articles especially focus upon the lambda calculus term rewriting and process algebra the fields to which Jan Willem Klop has made fundamental contributions

**Uncertain Automata and Uncertain Graph Grammar** Takaaki Fujita, Florentin Smarandache, 2025-01-01 Graph theory has been widely studied resulting in numerous applications across various fields Among its many topics Automata and Graph Grammar have emerged as significant areas of research This paper delves into these concepts emphasizing their adaptation to uncertain frameworks like Fuzzy Neutrosophic Vague Turiyam Neutrosophic and Plithogenic systems By integrating uncertainty into traditional graph theoretical models the paper aims to address ongoing research challenges and expand the scope of these models

Graph-Based Representations in Pattern Recognition Luc Brun, Mario Vento, 2005-03-10 Many vision problems have to deal with different entities regions lines line junctions etc and their relationships These entities together with their relationships may be encoded using graphs or hypergraphs The structural information encoded by graphs allows computer vision algorithms to address both the features of the different entities and the structural or topological relationships between them Moreover turning a computer vision problem into a graph problem allows one to access the full arsenal of graph algorithms developed in computer science The Technical Committee TC15 <http://www.iapr.org/tcs.html> of the IAPR International Association for Pattern Recognition has been funded in order to federate and to encourage research work in these fields Among its activities TC15 encourages the organization of special graph sessions at many computer vision conferences and organizes the biennial workshop GbR While being designed within a specific framework the graph algorithms developed for computer vision and pattern recognition tasks often share constraints and goals with those developed in other research fields such as data mining robotics and discrete geometry The TC15 community is thus not closed in its research fields but on the contrary is open to interchanges with other groups communities
