Historical Epistemology of Space Matthias Schemmel, 2015-12-11 This monograph investigates the development of human spatial knowledge by analyzing its elementary structures and studying how it is further shaped by various societal conditions. By taking a thoroughly historical perspective on knowledge and integrating results from various disciplines, this work throws new light on long-standing problems in epistemology such as the relation between experience and preformed structures of cognition. What do the orientation of apes and the theory of relativity have to do with each other? Readers will learn how different forms of spatial thinking are related in a long-term history of knowledge. Scientific concepts of space such as Newton's absolute space or Einstein's curved spacetime are shown to be rooted in pre-scientific structures of knowledge while at the same time enabling the integration of an ever-expanding corpus of experiential knowledge. This work addresses all readers interested in questions of epistemology in particular philosophers and historians of science. It integrates forms of spatial knowledge from disciplines including anthropology, developmental psychology, and cognitive sciences amongst others.

The Anthropocenic Turn GABRIELE DÜRBECK, PHILIP HÜPKES, 2020-03-12 This interdisciplinary volume discusses whether the increasing salience of the Anthropocene concept in the humanities and the social sciences constitutes an Anthropocenic turn. The Anthropocene discourse creates novel conceptual configurations and enables scholars to re-negotiate and re-contextualize long-established paradigms, premises, theories, and methodologies. These innovative constellations stimulate fresh research in many areas of thought and practice. The contributors to this volume respond to the proposition of an Anthropocene turn from the perspective of diverse research fields including history of science, philosophy, environmental humanities, and political science as well as literary art and media studies. Altogether, the collection reveals to which extent the Anthropocene concept challenges deep-seated assumptions across disciplines. It invites readers to explore the wealth of scholarly perspectives on the Anthropocene as well as unexpected inter- and transdisciplinary connections. Thinking of

Space Relationally Xiaoxue Gao, 2021-03-15 Since the relational turn, scholars have combated methodological universalism, nationalism, and individualism in researching social spatial transformations. Yet when leaving the gaps between the traveling and local epistemic assumptions unattended, engaging relational spatial theories in empirical research may still reproduce established theoretical claims. Following the sociology of knowledge tradition and taking Critical Realism as a meta-theoretical framework, Xiaoxue Gao takes relational spatial theories as traveling conceptual knowledge and develops meaningful and context-sensitive ways of engaging them in studying the complex urban phenomenon in China. She offers conceptual elucidations and methodological roadmaps which leap productively from employing plural causal hypotheses to generating effect-based explanations for locally observable events. They are exemplified by manifold interrogations of Beijing's Artworld as a conjuncture of particular events.

The Evolution of Knowledge Jürgen Renn, 2022-05-03 A fundamentally new approach to the history of science and technology. This book presents a new way of thinking about the history of science.

and technology one that offers a grand narrative of human history in which knowledge serves as a critical factor of cultural evolution Jürgen Renn examines the role of knowledge in global transformations going back to the dawn of civilization while providing vital perspectives on the complex challenges confronting us today in the Anthropocene this new geological epoch shaped by humankind Renn reframes the history of science and technology within a much broader history of knowledge analyzing key episodes such as the evolution of writing the emergence of science in the ancient world the Scientific Revolution of early modernity the globalization of knowledge industrialization and the profound transformations wrought by modern science He investigates the evolution of knowledge using an array of disciplines and methods from cognitive science and experimental psychology to earth science and evolutionary biology The result is an entirely new framework for understanding structural changes in systems of knowledge and a bold new approach to the history and philosophy of science Written by one of today's preeminent historians of science *The Evolution of Knowledge* features discussions of historiographical themes a glossary of key terms and practical insights on global issues ranging from climate change to digital capitalism This incisive book also serves as an invaluable introduction to the history of knowledge

Elements of a Historical Epistemology of Space, 2013 **Spatial Thinking and External Representation** Matthias Schemmel (Ed.), 2016 Spatial knowledge takes different forms in different societies and at different times in history depending on the spatial experiences accounted for and the available means for the external representation of knowledge The volume presents and analyses manifestations of spatial thinking in the language and practices of recent non literate societies in the administrative institutions of early civilizations in discursive contexts of ancient Greece and China in early modern natural philosophy and metaphysics and in twentieth century physics and discusses their historical and structural relations

Heisenberg's 1958 Weltformel and the Roots of Post-Empirical Physics Alexander S. Blum, 2019-05-14 This book presents the first detailed account of Werner Heisenberg's failed attempt to find a theory of everything in the autumn of his career It further investigates what we can learn from his failure in relation to the search for a final theory of physics an endeavour that continues to define research in fundamental physics to this day Thereby it provides the first historically informed contribution to the current debate on post empirical physics and the state of particle physics
