

THE COELACANTH

This is a rare and primitive coelacanth from the Comoro islands, apparently the same species as one just discovered 6,200 miles away in deep waters off Sulawesi in Indonesia.

Long believed extinct until the first living one was found 60 years ago, the new Sulawesi specimen weighs about 65 pounds and is four feet long.

History Of The Coelacanth Fishes:

History of the Coelacanth Fishes Peter Forey, 1997-11-30 This book evaluates the reputation of the coelacanth presenting up to date accounts of the structure of fossil coelacanths and suggests a family history to show that there have been subtle but significant changes in coelacanth history The Annotated Old Four Legs: The story of the coelacanth Mike Bruton, 2017-11-01 When the famous South African fish scientist Professor JLB Smith published *Old Fourlegs The Story of the Coelacanth* in 1956 he created an international sensation After all this 400 million year old fish known only from fossil remains was thought to have become extinct around 66 million years ago JLB Smith's dramatic account of the discovery of the first and second coelacanths in 1938 and 1952 turned him into a cult figure and put South African science on the world map His book was eventually published in six English editions and translated into nine foreign languages Mike Bruton's *The Annotated Old Fourlegs* includes a facsimile reprint of the original book to which he has added notes and images in the margins that provide an interesting and revealing commentary on Smith's text as well as new introductory and explanatory chapters that bring the coelacanth story up to date **Evolution and Development of Fishes** Zerina Johanson, Charlie Underwood, Martha Richter, 2019-01-10 World class palaeontologists and biologists summarise the state of the art on fish evolution and development **The biology of *Latimeria chalumnae* and evolution of coelacanths** J.A. Encyclopedia of Fish Physiology, 2011-06-01 Fish form an extremely diverse group of vertebrates At a conservative estimate at least 40% of the world's vertebrates are fish On the one hand they are united by their adaptations to an aquatic environment and on the other they show a variety of adaptations to differing environmental conditions often to extremes of temperature salinity oxygen level and water chemistry They exhibit an array of behavioural and reproductive systems Interesting in their own right this suite of adaptive physiologies provides many model systems for both comparative vertebrate and human physiologists This four volume encyclopedia covers the diversity of fish physiology in over 300 articles and provides entry level information for students and summary overviews for researchers alike Broadly organised into four themes articles cover Functional Thematic and Phylogenetic Physiology and Fish Genomics Functional articles address the traditional aspects of fish physiology that are common to all areas of vertebrate physiology including Reproduction Respiration Neural Sensory Central Effector Endocrinology Renal Cardiovascular Acid base Balance Osmoregulation Ionoregulation Digestion Metabolism Locomotion and so on Thematic Physiology articles are carefully selected and fewer in number They provide a level of integration that goes beyond the coverage in the Functional Physiology topics and include discussions of Toxicology Air breathing Migrations Temperature Endothermy etc Phylogenetic Physiology articles bring together information that bridges the physiology of certain groupings of fishes where the knowledge base has a sufficient depth and breadth and include articles on Ancient Fishes Tunas Sharks etc Genomics articles describe the underlying genetic component of fish physiology and high light their suitability and use as model organisms for the study of disease stress and physiological adaptations and reactions to external conditions Winner of

Brian K. Hall, 2008-09-15 Long ago fish fins evolved into the limbs of land vertebrates and tetrapods During this transition some elements of the fin were carried over while new features developed Lizard limbs bird wings and human arms and legs are therefore all evolutionary modifications of the original tetrapod limb A comprehensive look at the current state of research on fin and limb evolution and development this volume addresses a wide range of subjects including growth structure maintenance function and regeneration Divided into sections on evolution development and transformations the book begins with a historical introduction to the study of fins and limbs and goes on to consider the evolution of limbs into wings as well as adaptations associated with specialized modes of life such as digging and burrowing Fins into Limbs also discusses occasions when evolution appears to have been reversed in whales for example whose front limbs became flippers when they reverted to the water as well as situations in which limbs are lost such as in snakes With contributions from world renowned researchers Fins into Limbs will be a font for further investigations in the changing field of evolutionary developmental biology
