**Point-of-care testing** Peter Lupp, Ralf Junker, 2018-07-18 The underlying technology and the range of test parameters available are evolving rapidly The primary advantage of POCT is the convenience of performing the test close to the patient and the speed at which test results can be obtained compared to sending a sample to a laboratory and waiting for results to be returned Thus a series of clinical applications are possible that can shorten the time for clinical decision making about additional testing or therapy as delays are no longer caused by preparation of clinical samples transport and central laboratory analysis Tests in a POC format can now be found for many medical disciplines including endocrinology diabetes cardiology nephrology critical care fertility hematology coagulation infectious disease and microbiology and general health screening Point of care testing POCT enables health care personnel to perform clinical laboratory testing near the patient The idea of conventional and POCT laboratory services presiding within a hospital seems contradictory yet they are in fact complementary together POCT and central laboratory are important for the optimal functioning of diagnostic processes They complement each other provided that a dedicated POCT coordination integrates the quality assurance of POCT into the overall quality management system of the central laboratory The motivation of the third edition of the POCT book from Lupp Junker which is now also available in English is to explore and describe clinically relevant analytical techniques organizational concepts for application and future
