Within the first few days of life, an infant has to first learn the coordination of sucking, breathing and swallowing. Next there is learning tongue control and movement that will eventually lead to chewing. With the introduction of complementary foods at around six months, infants learn how to open their mouths in response to food, start learning how to bite soft foods, and how to hold and bring it to their mouths. Every movement from bringing food to mouth, opening mouth, biting, moving tongue to chew food and then swallowing are all learned skills.
