*Intrusion Detection and Correlation* Christopher Kruegel, Fredrik Valeur, Giovanni Vigna, 2005-12-29 Intrusion Detection and Correlation Challenges and Solutions presents intrusion detection systems IDSs and addresses the problem of managing and correlating the alerts produced This volume discusses the role of intrusion detection in the realm of network security with comparisons to traditional methods such as firewalls and cryptography The Internet is omnipresent and companies have increasingly put critical resources online This has given rise to the activities of cyber criminals Virtually all organizations face increasing threats to their networks and the services they provide Intrusion detection systems IDSs take increased pounding for failing to meet the expectations researchers and IDS vendors continually raise Promises that IDSs are capable of reliably identifying malicious activity in large networks were premature and never tuned into reality While virus scanners and firewalls have visible benefits and remain virtually unnoticed during normal operations the situation is different with intrusion detection sensors State of the art IDSs produce hundreds or even thousands of alerts every day Unfortunately almost all of these alerts are false positives that is they are not related to security relevant incidents Intrusion Detection and Correlation Challenges and Solutions analyzes the challenges in interpreting and combining i e correlating alerts produced by these systems In addition existing academic and commercial systems are classified their advantage and shortcomings are presented especially in the case of deployment in large real world sites

**Recent Advances in Intrusion Detection** Herve Debar, Ludovic Me, S. Felix Wu, 2003-06-26 Since 1998 RAID has established its reputation as the main event in research on intrusion detection both in Europe and the United States Every year RAID gathers researchers security vendors and security practitioners to listen to the most recent research results in the area as well as experiments and deployment issues This year RAID has grown one step further to establish itself as a well known event in the security community with the publication of hardcopy proceedings RAID 2000 received 26 paper submissions from 10 countries and 3 continents The program committee selected 14 papers for publication and examined 6 of them for presentation In addition RAID 2000 received 30 extended abstracts proposals 15 of these extended abstracts were accepted for presentation tended abstracts are available on the website of the RAID symposium series <http://www.raid-symposium.org> We would like to thank the technical p gram committee for the help we received in reviewing the papers as well as all the authors for their participation and submissions even for those rejected As in previous RAID symposiums the program alternates between fun mental research issues such as new technologies for intrusion detection and

more practical issues linked to the deployment and operation of intrusion detection systems in a real environment Five sessions have been devoted to intrusion detection technology including modeling data mining and advanced techniques

*OSSEC Host-based Intrusion Detection Guide* Andrew Hay, Daniel Cid, Rory Bray, 2008 Stephen Northcutt OSSEC determines if a host has been compromised in this manner by taking the equivalent of a picture of the host machine in its original unaltered state This picture captures the most relevant information about that machine's configuration OSSEC saves this picture and then constantly compares it to the current state of that machine to identify anything that may have changed from the original configuration Now many of these changes are necessary harmless and authorized such as a system administrator installing a new software upgrade patch or application But then there are the not so harmless changes like the installation of a rootkit trojan horse or virus Instant OSSEC Host-based Intrusion Detection System Brad

the fall of 1999 I was asked to teach a course on computer intrusion detection for the Department of Mathematical Sciences of The Johns Hopkins University That course was the genesis of this book I had been working in the field for several years at the Naval Surface Warfare Center in Dahlgren Virginia under the auspices of the SHADOW program with some funding by

the Office of Naval Research In designing the class I was concerned both with giving an overview of the basic problems in computer security and with providing information that was of interest to a department of mathematicians Thus the focus of the course was to be more on methods for modeling and detecting intrusions rather than one on how to secure one s computer against intrusions The first task was to find a book from which to teach I was familiar with several books on the subject but they were all at either a high level focusing more on the political and policy aspects of the problem or were written for security analysts with little to interest a mathematician I wanted to cover material that would appeal to the faculty members of the department some of whom ended up sitting in on the course as well as providing some interesting problems for students None of the books on the market at the time had an adequate discussion of mathematical issues related to intrusion detection
