WEB ENGINEERING CHOPRA, RAJIV , 2016-06-16 Written in an easy to grasp language the book brings to light the various topics pertaining to Web engineering at one place in a comprehensive manner The text organized in eleven

chapters enables its readers to analyze model design code test and maintain their Web sites Through its systematic presentation of topics i e from basic level to advanced level the book apprises the readers with the finer points of the various phases of Web development life cycle like Web analysis Web design Web coding Web technologies Web testing and Web maintenance The book is adaptive enough for practical implementation of the concepts thereby allowing its readers to avoid or overcome hacking to master client side and server side programming and to develop good quality Web applications Using explicit descriptions and scripting languages like VBScript JavaScript and much more this book is a must have book for all those who are associated with the field of Web engineering Information Systems Research Methods, Epistemology, and Applications Cater-Steel, Aileen, Al-Hakim, Latif, 2008-11-30 The book deals with the concepts and applications of information systems research both theoretical concepts of information systems research and applications Provided by publisher

Human Computer Interaction: Issues and Challenges Chen, Qiyang, 2000-07-01 As human life increasingly relates to and relies upon interactions with computer systems researchers designers managers and users continuously develop desires to understand the current situations and future development of human computer interactions Human Computer Interactions Issues and Challenges focuses on the multidisciplinary subject of HCI which impacts areas such as information technology computer science psychology library science education business and management This book geared toward researchers designers analysts and managers reflects the most current primary issues regarding human computer interactive systems by emphasizing effective design use and evaluation of such systems **Innovations in E-learning, Instruction Technology, Assessment and Engineering Education** Magued Iskander, 2007-09-04 This book includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Engineering Education Instructional Technology Assessment and E learning The book presents selected papers from the conference proceedings of the International Conference on Engineering Education Instructional Technology Assessment and E learning EIAE 2006 All aspects of the conference were managed on line Business Horizons Kelly School of Business, 2003 **Specification Mining on the User Interface Level** Fabian Richter, 2020-10-20 Master s Thesis from the year 2012 in the subject Computer Science Software grade 1 0 Technical University of Darmstadt Secure Software Engineering Group language English abstract In this thesis we propose another approach targeted at web applications that use Ajax HTML5 and other modern web technologies to achieve a look and feel that is only known by desktop applications These web applications are also referred to as Rich Internet Application RIA The user interface is a part of an application the same way its business logic is This requires software engineers to test the user interface to verify its correctness to the same extend they test the rest of the application But testing graphical user interfaces is a tedious task without standardized testing technologies engi neers use for business logic verification like unit testing To address this shortcoming research groups applied the concept of model based testing to user interface testing In model based testing an abstraction of the actual graphical user interface is used

and test sequences are generated from the model The model as a formal specification can also be checked by a model checker or pose as a test oracle to validate the correctness of the application Ideally such a model or specification can be generated or mined by an automated process This process is usually referred to as specification mining and relieves the test engineer of the task to keep the specification up to date Many tools and approaches have been proposed to target different kinds of applications and properties that the mining tool infers At europe s biggest software company SAP where this thesis was manufactured many RIAsarebe ing developed based on a user interface library called SAPUI5 This library helps developers to create uniform looking RIAs To test their graphical user interface and ensure quality software our approach supports this testing process by using a web crawler known from search engines to automatically infer a specification or model from these interfaces We achieved this by modifying the Ajax capable crawler Crawljax by A Mesbah and using a new more efficient and modular state abstraction based on XPath expressions Our CrawljaxXT also addresses many bugs and shortcomings of the original Crawljax and thus allows for reliable creation of complete user interface models without overly detailed state abstractions Concluding we successfully evaluated our mined models and its testing capabilities with a modified version of the free model based testing tool Graphwalker
