Designed for Death Steven Umbrello, 2022-09-19 Autonomous weapons systems often referred to as killer robots have been a hallmark of popular imagination for decades However with the inexorable advance of artificial intelligence systems AI and robotics killer robots are quickly becoming a reality These lethal technologies can learn adapt and potentially make life and death decisions on the battlefield with little to no human involvement This naturally leads to not only legal but ethical concerns as to whether we can meaningful control such machines and if so then how Such concerns are made even more poignant by the ever present fear that something may go wrong and the machine may carry out some action s violating the ethics or laws of war Researchers policymakers and designers are caught in the quagmire of how to approach these highly controversial systems and to figure out what exactly it means to have meaningful human

control over them if at all In *Designed for Death* Dr Steven Umbrello aims to not only produce a realistic but also an optimistic guide for how with human values in mind we can begin to design killer robots Drawing on the value sensitive design VSD approach to technology innovation Umbrello argues that context is king and that a middle path for designing killer robots is possible if we consider both ethics and design as fundamentally linked Umbrello moves beyond the binary debates of whether or not to prohibit killer robots and instead offers a more nuanced perspective of which types of killer robots may be both legally and ethically acceptable when they would be acceptable and how to design for them **Social**

Personalised Medicine, Individual Choice and the Common Good Britta van Beers, Sigrid Sterckx, Donna Dickenson, 2018-11-22 Hippocrates famously advised doctors it is far more important to know what person the disease has than what disease the person has Yet 2 500 years later personalised medicine based on individual genetic profiling and the achievements of genomic research claims to be revolutionary In this book experts from a wide range of disciplines critically examine this claim They expand the discussion of personalised medicine beyond its usual scope to include many other highly topical issues including human nuclear genome transfer three parent IVF stem cell derived gametes private umbilical cord blood banking international trade in human organs biobanks such as the US Precision Medicine Initiative direct to consumer genetic testing health and fitness self monitoring Although these technologies often prioritise individual choice the original ideal of genomic research saw the human genome as the common heritage of humanity The authors question whether personalised medicine actually threatens this conception of the common good **The Ethics of Behaviour Change**

The Idea of Authorship in Copyright Lior Zemer, 2017-03-02 As information flows become increasingly ubiquitous in our post digital environment the challenges to traditional concepts of intellectual property and the practices deriving from them are immense The romantic understanding of the lone author as an endless source of new creations has to face these challenges In order to do so this work presents a collectivist model of intellectual property rights The core argument is that since copyright works enjoy profit from significant public contribution they should not be privately owned but considered to be a joint enterprise made real by both the public and author It is argued that every copyright work depends on and is reflective of the author s exposure to externalities such as language culture and the various social events and processes that occur in the public domain therefore copyright works should not be regarded as exclusive private property The study takes its organizing principle from John Locke defining and proving the fatal flaw inherent in debates on copyright on the one hand the copyright community is eager to arm authors with a robust property right over their creation while on the other this community totally ignores the fact that the exposure of the individual to externalities is what makes him or her capable of creating material that is copyrightable Just as Locke was against the absolute authority of kings the expressed view of the study is against the exclusive right an author can claim
