

Safe Manual Handling

INTRODUCTION

LEGISLATION

More than a 100 European countries in the world have signed European and national laws on manual handling and lifting. These regulations are mostly in the workplace and for employers. The most important European Regulations (1984, 1986 and 1989) apply to most workplaces. However, these regulations do not cover a lot of work, for example the number of workers participating from these guidelines.

TYPES OF INJURY

The back is a series of bones with a thin supporting cartilage between them and ligaments, which support the spine. There is a protection mechanism to warn you about potential harm to your back.

The types of injury that occur are:

1. Strains, back muscle and tissue that occur over time due to repeated movements.
2. Sprains, such as twisting, twisting and overstretching the joints.

Anywhere in the musculo-skeletal system can be injured.

RISK ASSESSMENT

The purpose of a risk assessment is to:

1. Identify hazardous practices by looking at the **Task**, **Individual**, **Load** and the **Environment**. Then to decide what steps to be taken to reduce the risk of the existing conditions and to decide if further action is necessary.

The person carrying out the assessment should be:

1. Able to use the 'Four components of Health and Safety' in their Regulatory Risk, the Manual Handling Department, Department and the person doing the assessment.
2. Able to use the procedures being carried out.
3. Competent to carry out the task.
