## Biomass Energy

**Biomass energy** is a type of renewable energy that comes from organic materials, such as crops and animals. These materials are called biomass, and they can be used to produce heat, electricity, or fuel. Biomass energy has been used by humans for thousands of years, dating back to when people burned wood for heat and cooking.

One dominant source of household energy is wood, wood can be burned to produce heat, which can then be used for cooking or to warm houses. In some places, wood is still a primary source of energy for people.

Another source of biomass energy is crops, such as corn and sugarcane. These crops can be converted into biofuels, such as ethanol, which can be used to power vehicles. Biofuels are considered a cleaner alternative to traditional fossil fuels because they produce fewer greenhouse gas emissions.

Waste can also be used to generate electricity in power plants, incinerators, like steel, agricultural residues, or even municipal solid waste can be burned to produce steam. The steam then turns turbines that generate electricity.
