Informed Cities Making Research Work For Local Sustainability:

Informed Cities Marko Joas, Kate Theobald, David McGuinness, Cristina Garzillo, Stefan Kuhn, 2013-10-30 *Informed Cities* looks at the knowledge brokerage processes between cities and higher education institutions and in particular evaluates governance mechanisms for monitoring local sustainability and the role of research within this. The first part of the book provides an analysis of tools for governing sustainable cities and develops a typology of existing tools. It then considers approaches to monitor local sustainability on a European level focusing on a number of key tools such as the Covenant of Mayors Reference Framework for Sustainable Cities and Green Capital Award. The second part of the book introduces an explorative application of two tools that the author team have used in practice to monitor local sustainability: Urban Ecosystems Europe and Local Evaluation 21, presenting and evaluating European level data collected from local governments. The third part of the book looks deeper into a number of case studies discussing how a working and rewarding city university connection can be created and nourished in an administrative and political setting. Finally, the last part of the book reflects on lessons learned from the application of the tools and accompanying research process and makes recommendations for further developing monitoring tools for urban sustainability on a European level. This book will be essential reading for professionals in urban and regional planning who are tasked with monitoring the effects of sustainability policies as well as for graduate students in planning, environmental governance, sustainable development and related disciplines. **Localism**

and Neighbourhood Planning Brownill, Sue, Bradley, Quintin, 2017-01-18 As in many other areas of public policy in the United Kingdom, in recent years city planning has increasingly been localized all the way down to the neighborhood level. This book is the first to critically analyze this shift which has proved to be among the most contentious and controversial of all contemporary planning initiatives. Focusing on the newly granted rights of communities to draw up statutory Neighbourhood Development Plans, it moves from there to engage with larger debates about the theory and practice of localism, setting this trend within an international context with cases from the United States, Australia and France as well as the United Kingdom.

Sustainability · Strategy · Space - exploring influences on governing for urban sustainability in municipalities Paul Fenton, 2016-06-21 The pursuit of urban sustainability is considered central to sustainable development and is a key objective of the global Sustainable Development Goals 2015 and the New Urban Agenda 2016. This thesis aims to contribute to debates on urban sustainability by providing insights as to the role of actors participating in processes of governing for urban sustainability with particular focus on the municipal organisation. The thesis employs an interdisciplinary approach to illustrate divergent approaches to governing for urban sustainability with reference to empirical studies of strategic planning processes in municipalities in selected North western European countries: Sweden, Switzerland and The Netherlands. These studies address themes including climate change, sustainable transport and multi level governance. The thesis provides a broad overview of theoretical discussions related to governing strategy and planning, the role of actors in governing for urban

sustainability and the particular importance of climate change as a challenge for urban sustainability A number of research gaps are identified and addressed in two research questions focusing on the organisation and practice of processes of governing for urban sustainability and the factors influencing actors participating in such processes The thesis responds to these research questions with reference to five appended papers which illustrate different dimensions of governing for urban sustainability The first paper concerns the organisation of processes to develop energy and climate strategies in Swedish municipalities and the second paper highlights the experiences of actors participating in such processes The third paper presents results from a survey illustrating the expectations of stakeholders active in governing transport in the city of Norrköping Sweden In the fourth paper the development and implementation of policies aiming for sustainable transport and urban sustainability in Basel Switzerland are discussed In the final paper cooperation through transnational municipal networks is explored with reference to the World Ports Climate Declaration an initiative of the city of Rotterdam The thesis confirms the presence of five factors capacity mandate resources scope and will that shape the strategy space of actors and play an important role in conditioning the form and content of processes of governing for urban sustainability The thesis suggests that the ways in which a municipal organisation perceive and mobilise the five factors will strongly determine the extent of its sustainability strategy space In sum municipal organisations and other actors participating in processes of governing for urban sustainability need to mobilise the five factors and expand their strategy space in order to achieve vertical and horizontal alignment of strategic objectives and facilitate implementation that delivers transformative change

Cities in Transition Thomas Sauer, Susanne Elsen, Cristina Garzillo, 2016-02-26 *Cities in Transition* focuses on the sustainability transitions initiated in 40 European cities The book presents the incredible wealth of insights gathered through hundreds of interviews and questionnaires Four key domains local energy systems local green spaces local water systems and local labour markets have been the focus of the field research investigating local potentials for social innovation and new forms of civil society self organisation Examining the potential of new organizational frameworks like co-operatives multi stakeholder constructions local regional partnerships and networks for the success of such transitions this book presents the key ingredients of a sustainable urban community as a viable concept to address current global financial environmental and social challenges Crucial reading for academics and practitioners of urban planning and sustainability in Europe *Cities in Transition* is an innovative roadmap for sustainability in changing cities

Sustainability Governance and Hierarchy Philippe Hamman, 2019-06-19 *Sustainability Governance and Hierarchy* provides a solid theoretically and empirically grounded reflection on the concept of sustainability governance This idea has been growing in popularity in social science literature as well as among decision makers and governance actors as it brings together two vast fields of study that have sometimes been dismissed as vague or ideologically loaded In order to link the concepts of sustainability and governance the book is organized around the exploration of hierarchy issues which often lie in the background of the existing literature but

are not the focus of analysis The chapters reflect ongoing controversies and dialogue between scientists with different theoretical and thematic backgrounds who are all willing to participate in and contribute to a constructive effort to reach a more inclusive and more theoretically relevant stage for sustainability studies being content with merely global analyses The book is an innovative contribution to the hierarchy non hierarchy debate regarding governance arrangements in the field of sustainability and sustainability studies This book will be of interest to advanced students and scholars focusing on governance issues sustainability studies environmental studies as well as on the methodological aspects of the social sciences economy geography law philosophy political science sociology urbanism and planning This book is published with the support of the European Union the European Regional Development Fund ERDF and the Upper Rhine Interreg V programme as part of the Upper Rhine Cluster for Sustainability Research project

Advances in the Leading Paradigms of Urbanism and their Amalgamation Simon Elias Bibri, 2020-06-20 This book explores the recent advances in the leading paradigms of urbanism namely compact cities eco cities and data driven smart cities and the evolving approach to their amalgamation under the umbrella term of smart sustainable cities It addresses these advances by investigating how and to what extent the strategies of compact cities and eco cities and their merger have been enhanced and strengthened through new planning and development practices and are being supported and leveraged by the applied solutions pertaining to data driven smart cities The ultimate goal is to advance sustainability and harness its synergistic effects on multiple scales This

entails developing and implementing more effective approaches to the balanced integration of the three dimensions of sustainability as well as to producing combined effects of the strategies and solutions of the prevailing approaches to urbanism that are greater than the sum of their separate effects in terms of the tripartite value of sustainability Sustainable urban development is today seen as one of the keys towards unlocking the quest for a sustainable world And the big data revolution is set to erupt in cities throughout the world heralding an era where instrumentation datafication and computation are increasingly pervading the very fabric of cities and the spaces we live in thanks to the IoT Big data and the IoT technologies are seen as powerful forces that have tremendous potential for advancing urban sustainability Indeed they are instigating a massive change in the way sustainable cities can tackle the kind of special conundrums wicked problems and significant challenges they inherently embody as complex systems They offer a multitudinous array of innovative solutions and sophisticated approaches informed by groundbreaking research and data driven science As such they are becoming essential to the functioning of sustainable cities Besides yet knowing to what extent we are making progress towards sustainable cities is problematic adding to the fragmented conflicting picture that arises of change on the ground in the face of the escalating rate and scale of urbanization and in the light of emerging ICT and its novel applications In a nutshell new circumstances require new responses This timely and multifaceted book is intended for a wide readership As such it will appeal to researchers academics urban scientists urbanists planners designers policy makers and futurists as well as all readers interested in sustainable cities and their ongoing and future data driven transformation

Transitioning Toward Sustainability National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Transition Toward Sustainability After 15 Years: Where Do We Stand in Advancing the Scientific Foundation, 2016-07-25

In 1999 the National Academies of Sciences Engineering and Medicine released a landmark report Our Common Journey A Transition toward Sustainability which attempted to reinvigorate the essential strategic connections between scientific research technological development and societies efforts to achieve environmentally sustainable improvements in human well being 1 The report emphasized the need for place based and systems approaches to sustainability proposed a research strategy for using scientific and technical knowledge to better inform the field and highlighted a number of priorities for actions that could contribute to a sustainable future The past 15 years have brought significant advances in observational and predictive capabilities for a range of natural and social systems as well as development of other tools and approaches useful for sustainability planning In addition other frameworks for environmental decision making such as those that focus on climate adaptation or resilience have become increasingly prominent A careful consideration of how these other approaches might intersect with sustainability is warranted particularly in that they may affect similar resources or rely on similar underlying scientific data and models To further the discussion on these outstanding issues the National Academies of

Sciences Engineering and Medicine convened a workshop on January 14 15 2016 Participants discussed progress in sustainability science during the last 15 years potential opportunities for advancing the research and use of scientific knowledge to support a transition toward sustainability and challenges specifically related to establishing indicators and observations to support sustainability research and practice This report summarizes the presentations and discussions from the workshop *Environmental Risks of Genetically Engineered Fish* United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Oceans, Atmosphere, Fisheries, and Coast Guard, 2013
