## **Ingersoll Rand Unigy Manual:**

**The RAND/UCLA Appropriateness Method User's Manual**, 2001 The concepts of appropriate and necessary care are fundamental to the creation of an efficient and equitable health care delivery system Evidence of inappropriate overuse and underuse of procedures has been documented even in health systems characterised by the absence of global budgets capitation utilisation review or the pressure of requiring a second opinion Health systems should function in such a way that inappropriate care is progressively reduced while appropriate and especially necessary care are maintained or increased The ability to determine and identify which care is overused and which is underused is essential to this functioning To this end the RAND UCLA Appropriateness Method here given the acronym RAM was developed by RAND and UCLA in the 1980s It has been further developed and refined in North America and increasingly in Europe The Rand/UCLA Appropriateness Method User's Manual Kathryn Fitch, Steven J. Bernstein, Maria Delores Aguilar, Mary S. Aguilar, Bernard Burnand, Pablo Lazaro, Juan Ramon LaCalle, 2001 Health systems should function in such a way that the amount of inappropriate care is minimized while at the same time stinting as little as possible on appropriate and necessary care The ability to determine and identify which care is overused and which is underused is essential to this functioning To this end the RAND UCLA Appropriateness Method was developed in the 1980s It has been further developed and refined in North America and increasingly in Europe The rationale behind the method is that randomized clinical trials the gold standard for evidence based medicine are generally either not available or cannot provide evidence at a level of detail sufficient to apply to the wide range of patients seen in everyday clinical practice Although robust scientific evidence about the benefits of many procedures is lacking physicians must nonetheless make decisions every day about when to use them Consequently a method was developed that combined the best available scientific evidence with the collective judgment of experts to yield a statement regarding the appropriateness of performing a procedure at the level of patient specific symptoms medical history and test results This manual presents step by step guidelines for conceptualising designing and carrying out a study of the appropriateness of medical or surgical procedures for either diagnosis or treatment using the RAND UCLA Appropriateness Method The manual distills the experience of many researchers in North America and Europe and presents current as of the year 2000 thinking on the subject Although the manual is self contained and complete the authors do not recommend that those unfamiliar with the RAND UCLA Appropriateness Method independently conduct an appropriateness study instead they suggest seeing one before doing one To this end contact information is provided to assist potential users of the method
