Innovation Breakdown How The Fda And Wall Street Cripple Medical Advances:

Innovation Breakdown Joseph V. Gulfo, 2014-06-11 Winner of Maverick of The Year Award and Ernst the courtroom like trial in front of FDA's medical Advisory Panel is certainly one of those times A second was the declaration of war filing a Citizen Petition against the FDA demanding that it follow its own laws and acts transparently in honoring its binding agreements A third was a Congressional Hearing at which the FDA subsequently admitted that a mistake was made The book contains public record facts woven together in a series of compelling stories complete with unique characters and deeply personal insights Unrelenting focus even to the level of personal destruction and leadership through crises are other major themes Part One describes how medical innovation occurs in small companies and details the challenges in moving those start ups along a course that is anything but straightforward It addresses issues such as the psychology of inventors and founders versus investors the challenges of attracting and retaining talent and the vagaries of early phase product development Part Two takes a deep dive into the unlawful actions and cover ups by the U S FDA that had to be overcome in our effort to obtain approval of a non invasive product that saves lives It is a brutal blow by blow account of a public slugfest that forever damaged the company Part Three explains how the unnecessary and very public battle with the FDA left an indelible mark on the company a taint that was exploited by nefarious Wall Street actors who then preyed on the company for their own benefit It details how with a Scarlet Letter on its back and an albatross around its neck Wall Street's short sellers and dark pool traders hamstrung the course toward widespread use and adoption The book concludes with The Innovation Manifesto an actionable list of changes to help fix this horribly broken system including reform to the legal system to reduce meritless shareholder lawsuits securities reform to stop manipulative trading analysis and predatory shorting of small companies and FDA reform that will bring in leadership that is committed to and unafraid of promoting health by proactively advancing the development and approval of innovative products rather than simply blocking drugs and devices that are not deemed to be safe The FDA needs to get back to its first principles and to stop the propaganda the author knows how to make that happen In medical school and residency the author was taught to see one do one and teach one as the means to master a procedure and to complete the circle of education With respect to biotech and medtech companies that have been severely compromised by an untenable system having seen one done one and taught one he now seeks to prevent a hundred similar unfortunate examples Continued advancement of our national health depends on it **Innovation Breakdown**

Joseph Gulfo, 2014-01-12 **Innovation Breakdown** Joseph V. Gulfo, 2017-03-07 How do you convert a potentially life saving new idea into an actual medical product and then make it available to doctors and patients Joseph Gulfo thought he knew what to do but he thought wrong *Permissionless Innovation: The Continuing Case for Comprehensive Technological Freedom* Adam Thierer, 2016-03-15 Will innovators be forced to seek the blessing of public officials before they develop and deploy new devices and services or will they be generally left free to experiment with new technologies and business models

In this book Adam Thierer argues that if the former disposition the precautionary principle trumps the latter permissionless innovation the result will be fewer services lower quality goods higher prices diminished economic growth and a decline in the overall standard of living When public policy is shaped by precautionary principle reasoning it poses a serious threat to technological progress economic entrepreneurialism and long run prosperity By contrast permissionless innovation has fueled the success of the Internet and much of the modern tech economy in recent years and it is set to power the next great industrial revolution if we let it Doing Research in Emergency and Acute Care Michael P. Wilson, Kama Z.

Guluma, Stephen R. Hayden, 2016-03-02 A practical guide to understanding and navigating the unique challenges faced by physicians and other professionals who wish to undertake research in the ED or other acute care setting Focusing on the hyper acute and acute care environment and fulfilling two closely related needs 1 the need for even seasoned researchers to understand the specific logistics and issues of doing research in the ED and 2 the need to educate clinically active physicians in research methodology This new text is not designed to be a complex encyclopedic resource but instead a concise easy to read resource designed to convey key need to know information within a comprehensive framework Aimed at the busy brain either as a sit down read or as a selectively read reference guide to fill in knowledge gaps chapters are short compartmentalized and are used strategically throughout the text in order to introduce and frame concepts This format makes it easy and even entertaining for the research novice to integrate and absorb completely new and typically dry material The textbook addresses aspects of feasibility efficiency ethics statistics safety logistics and collaboration in acute research Overall it grants access for the seasoned researcher seeking to learn about acute research to empathically integrate learning points into his or her knowledge base As the ED is the primary setting for hyper acute and acute care and therefore a prime site for related clinical trial recruitment and interventions the book presents specific logistical research challenges that researchers from any discipline including physicians research nurse coordinators study monitors or industry partners need to understand in order to succeed **Evasive Entrepreneurs and the Future of Governance** Adam

Thierer, 2020-04-28 Innovators of all stripes such as Airbnb and Uber are increasingly using new technological capabilities to circumvent traditional regulatory systems or at least put pressure on public policymakers to reform laws and regulations that are outmoded inefficient or illogical Disruptive innovators are emerging in other fields too using technologies as wide ranging as 3D printers drones driverless cars Bitcoin and blockchain virtual reality the Internet of Things and more Some of these innovators just love to tinker Others want to change the world with new life enriching products And many more are just looking to earn a living and support their families Regardless of why they are doing it these evasive entrepreneurs innovators who don't always conform to social or legal norms are changing the world and challenging their governments Beyond boosting economic growth and raising our living standards evasive entrepreneurialism can play an important role in constraining unaccountable governmental activities that often fail to reflect common sense or the consent of the governed In

essence evasive entrepreneurialism and technological civil disobedience are new checks and balances that help us rein in the excesses of the state make government more transparent and accountable and ensure that our civil rights and economic liberties are respected Evasive Entrepreneurs and the Future of Governance explores why evasive entrepreneurs are increasingly engaged in different forms of technological civil disobedience and also makes the case that we should accept and often even embrace a certain amount of that activity as a way to foster innovation economic growth and accountable government

The Care Quotient Joseph V. Gulfo, 2016-09-13 The Care Quotient is a leadership book that presents caring as the single most important character trait needed to drive business success and employee fellowship The Care Quotient is a prescription for business and personal success based on caring about the right things Selfless caring is based on a moral belief system that demands that principles and truth are your highest goals and that taking personal responsibility is your defining quality Selfless caring drives you to leave people and circumstances better than you found them It is a virtually limitless source of energy that fuels tireless preparation and incessant trial and error and personal reinvention If you selflessly care you will Realize that management is a gift and a profound responsibility Reinvent yourself and your approach as often as it takes to be successful Take the time to teach and mentor and to be taught and mentored Make difficult decisions Set a great example all the time Take chances on people and cultivate talent From these critical behaviors come the winning strategies and desired outcomes time after time True fellowship flows from the engagement alignment inspiration and motivation that a selflessly caring leader engenders

Translating promising discoveries and innovations into useful marketable medical products demands a robust process to guide nascent products through a tangle of scientific clinical regulatory economic social and legal challenges There are so many human and environmental elements involved in shepherding medical advances from lab to launch that the field of medical product development has been referred to as an ecosystem The purpose of this book is to help provide a shared foundation from which cross functional participants in that ecosystem can negotiate the product development labyrinth and accomplish the goal of providing both groundbreaking and iterative new medical products The book is intended for anyone in industry the public sector or academia regardless of functional specialty workplace or seniority who is interested in medical product development The years since the publication of the previous edition of this book have seen profound changes in the actions and attitudes of patients insurers manufacturers and the Food and Drug Administration regarding the streamlining of medical product development and approval What those years have not seen is a concomitant increase in innovative treatments with profound benefits to patients Despite enormous investments in research by both private and public sources and a surge in scientific and technological advances new medical products barely trickle into the marketplace For a variety of reasons applied sciences necessary for medical product development are not keeping pace with the tremendous advances in basic sciences Not surprisingly industry and academia are under substantial pressure to transform discoveries and innovations from the laboratory into safe and effective medical products to benefit patients and improve health This evolution from bench to bedside has become known as translational research and development and this approach is what this book illuminates I have been working in medical device design and design assurance for over 10 years Elaine Whitmore really gets this right The point is that quality regulations are not going to go away and those responsible for healthcare product development will have to lead the charge to keep up the momentum in their organizations I am going to have to buy several copies of this for my clients Joseph P Sener P E *Regulating Innovation* United States.
