Architecture and Methods for Flexible Content Management in Peer-to-Peer Systems Udo Bartlang,2010-04-11 At times when the IT manager s best friend is systems consolidation which is a euphemism for centralisation it may come somewhat as a surprise for you that this book investigates decentralisation in the context of content management systems It may seem quite obvious that content will and should be managed by the party who creates and owns the content and hence should be held in a somewhat centralised and managed location However over the past few years we have been witnesses of some important trends and developments which call for novel ways of thinking about content management and maybe even broader about computer systems in general First ongoing business globalization creates natural distribution of information at a corporate level as well as decentralization of control over business resources and business processes Changing alliances with partners require exible architectures for content management that can adapt to changing constellations roles and access rights Second the need for outsourcing and resource efficiency has brought about concepts of virtualization recently culminating in the cloud computing buzzword Virtualization of content management services requires tremely scalable and exible underlying information and communication architectures These kinds of solutions are theoretically and practically impossible to implement based on c tralised client server architectures Third we are currently experiencing a dramatic shift in the roles of consumers in the Internet The times have gone when quality content was only delivered by publishers and news agencies Wikis and other Web 2 0 tools empower consumers to produce and publish their personal content

Mindell,2003-04-30 Today we associate the relationship between feedback control and computing with Norbert Wiener s 1948 formulation of cybernetics But the theoretical and practical foundations for cybernetics control engineering and digital computing were laid earlier between the two world wars In Between Human and Machine Feedback Control and Computing before Cybernetics David A Mindell shows how the modern sciences of systems emerged from disparate engineering cultures and their convergence during World War II Mindell examines four different arenas of control systems research in the United States between the world wars naval fire control the Sperry Gyroscope Company the Bell Telephone Laboratories and Vannevar Bush s laboratory at MIT Each of these institutional sites had unique technical problems organizational imperatives and working environments and each fostered a distinct engineering culture Each also developed technologies to represent

the world in a machine At the beginning of World War II President Roosevelt established the National Defense Research Committee one division of which was devoted to control systems Mindell shows how the NDRC brought together representatives from the four pre war engineering cultures and how its projects synthesized conceptions of control communications and computing By the time Wiener articulated his vision these ideas were already suffusing through engineering They would profoundly influence the digital world As a new way to conceptualize the history of computing this book will be of great interest to historians of science technology and culture as well as computer scientists and theorists Between Human and Machine Feedback Control and Computing before Cybernetics **Library of Congress Subject**
