The Routledge Handbook of Geospatial Technologies and Society Alexander J. Kent, Doug Specht, 2023-08-17 The Routledge Handbook of Geospatial Technologies and Society provides a relevant and comprehensive reference point for research and practice in this dynamic field. It offers detailed explanations of geospatial technologies and provides critical reviews and appraisals of their application in society within international and multi-disciplinary contexts as agents of change. The ability of geospatial data to transform knowledge in contemporary and future societies forms an important theme running throughout the entire volume. Contributors reflect on the changing role of geospatial technologies in society and highlight new applications that represent transformative directions in society and point towards new horizons. Furthermore, they encourage dialogue across disciplines to bring new theoretical perspectives on geospatial technologies from neurology to heritage studies. The international contributions from leading scholars and influential practitioners that constitute the Handbook provide a wealth of critical examples of these technologies as agents of change in societies around the globe. The book will appeal to advanced undergraduates and practitioners interested or engaged in their application worldwide.

Remote Sensing Handbook, Volume II Prasad S. Thenkabail, 2024-11-29 Volume II of the Six Volume Remote Sensing Handbook Second Edition is focused on digital image processing including image classification methods in land cover and land use. It discusses object based segmentation and pixel based image processing algorithms, change detection techniques and image classification for a wide array of applications including land use, land cover, croplands, urban studies, processing hyperspectral remote sensing data, thermal imagery, light detection and ranging (LiDAR) geoprocessing workflows, frontiers of GIScience and future pathways. This thoroughly revised and updated volume draws on the expertise of a diverse array of leading international authorities in remote sensing and provides an essential resource for researchers at all levels interested in using remote sensing. It integrates discussions of remote sensing principles, data methods, development, applications and scientific and social context. Features: Provides the most up to date comprehensive coverage of digital image processing. Highlights object based image analysis (OBIA) and pixel based classification methods and techniques of digital image processing. Demonstrates practical examples of image processing for a myriad of applications such as land use, land cover, croplands and urban. Establishes image processing using different types of remote sensing data that includes multispectral, radar, LiDAR, thermal and hyperspectral. Highlights change detection, geoprocessing and GIScience. This volume is an excellent resource for the entire remote sensing and GIS community. Academics, researchers, undergraduate and graduate students as well as practitioners, decision makers and policymakers will benefit from the expertise of the professionals featured in this book and their extensive knowledge of new and emerging trends. *Remote Sensing Handbook - Three Volume Set* Prasad Thenkabail, 2018-10-03 A volume in the three volume Remote Sensing Handbook series. Remote Sensing of Water Resources, Disasters and Urban Studies documents the scientific and methodological advances that have taken place

during the last 50 years The other two volumes in the series are Remotely Sensed Data Characterization Classification and Accuracies and Land Reso

Biomimetic and Biohybrid Systems Stuart P. Wilson, Paul F.M.J. Verschure, Anna Mura, Tony J. Prescott, 2015-07-23 This book constitutes the proceedings of the 4th International Conference on Biomimetic and Biohybrid Systems Living Machines 2015 held in Barcelona Spain in July 2015 The 34 full and 13 short papers presented in this volume were carefully reviewed and selected from 50 submissions The themes they deal with are locomotion particularly for soft bodies novel sensing and autonomous control systems and cognitive architectures social robots and human robot interaction

Advances in Physical Agents Raquel Fuentetaja Pizán, Ángel García Olaya, Maria Paz Sesmero Lorente, Jose Antonio Iglesias Martínez, Agapito Ledezma Espino, 2018-11-20 The book reports on cutting edge theories and methods aimed at the control and coordination of agents acting and moving in a dynamic environment It covers a wide range of systems including multiagent systems domotic agents robotic manipulators soccer robots autonomous and semiautonomous robots as well as systems for industrial applications Advances in software agents sensors computer visions and other related areas are also thoroughly discussed and presented in detail Based on the 19th edition of the International Workshop of Physical Agents WAF 2018 held on November 22 23 2018 in Madrid Spain this book offers a snapshot of the state of the art in the field of physical agents with a special emphasis on autonomous systems such as mobile robots industrial process or other complex systems

Smart Technologies (Hardware and Software) Mr. Rohit Manglik, 2024-03-10 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students

across various streams and levels *Image Processing & Communications Challenges 2* Ryszard S. Choras, 2010-10-05

Image Processing and Communications represents an exciting and dynamic part of the information area This book consists of 52 scientific and technical papers from 14 Nations after a careful selection performed by many international reviewers The papers are conveniently grouped into 6 chapters Computer Vision and Image Processing Biometric Recognition and Classification Biomedical Image Processing Applications Communications Each chapter focuses on a specific topic presents results and points out challenges and future directions **Smart Wireless Acoustic Sensor Network Design for Noise Monitoring in Smart Cities** Rosa Ma Alsina-Pagès, Patrizia Bellucci, Giovanni Zambon, 2021-01-15

The Environmental Noise Directive END requires that a five year updating of noise maps is carried out to check and report on the changes that have occurred during the reference period The updating process is usually achieved using a standardized approach consisting of collecting and processing information through acoustic models to produce the updated noise maps This procedure is time consuming and costly and has a significant impact on the financial statement of the authorities responsible for providing the maps Furthermore the END requires that easy to read noise maps are made available to the public to provide information on noise levels and the subsequent actions to be undertaken by local and central authorities to reduce noise impacts In order to update the noise maps more easily and in a more effective way it is convenient to design an integrated system incorporating real time noise measurement and signal processing to identify and analyze the noise sources present in the mapping area e g road traffic noise leisure noise etc as well as to automatically generate and present the corresponding noise maps This wireless acoustic sensor network design requires transversal knowledge from accurate hardware design for acoustic sensors to network structure design and management of the information with signal processing to identify the origin of the measured noise and graphical user interface application design to present the results to end users This book is collection in which several views of methodology and technologies required for the development of an efficient wireless acoustic sensor network from the first stages of its design to the tests conducted during deployment its final performance and possible subsequent implications for authorities in terms of the definition of policies Contributions include several LIFE and H2020 projects aimed at the design and implementation of intelligent acoustic sensor networks with a focus on the publication of good practices for the design and deployment of intelligent networks in other locations *Remotely Sensed Data Characterization, Classification, and Accuracies* Ph.D., Prasad S. Thenkabail, 2015-10-02

A volume in the Remote Sensing Handbook series

Remotely Sensed Data Characterization Classification and Accuracies documents the scientific and methodological advances that have taken place during the last 50 years The other two volumes in the series are Land Resources Monitoring Modeling and Mapping with Remote Sensing and Remote Sensing of Water Resources Disasters and Urban Studies This volume demonstrates the experience utility methods and models used in studying a wide array of remotely sensed data characterization classification and accuracies for terrestrial applications Leading experts on global geographic coverage

study areas and array of satellite and sensors contribute to this unique handbook This theoretical as well as highly practical book represents a thorough history of advancement in the field over last 50 years bringing us to where we are now and highlighting future possibilities Highlights include Fundamental and advanced topics in remote sensing satellites and sensors Remote sensing data calibration normalization harmonization and synthesis Optical Radar LiDAR thermal hyperspectral and other satellite sensors normalization of remotely sensed data and data degradations Digital image processing urban image classification and image classification methods in land use land cover cropland change detection studies Enhanced vegetation indices and standardization of vegetation indices Object based image analysis OBIA and geospatial data integration LiDAR data processing and applications Geoprocessing GIS and GIScience GNSS applications Crowdsourcing and cloud computing Google Earth for Earth Sciences Map accuracies Remote sensing law or space law and a host of other topics

Street Smart Samuel I Schwartz, 2015-08-18 On a Saturday morning in December 1973 a section of New York's West Side Highway collapsed under the weight of a truck full of asphalt The road was closed seemingly for good and the 80 000 cars that traveled it each day had to find a new way to their destinations It ought to have produced traffic chaos but it didn't The cars simply vanished It was a moment of revelation the highway had induced the demand for car travel It was a classic case of build it and they will come but for the first time the opposite had been shown to be true knock it down and they will go away Samuel I Schwartz was inspired by the lesson He started to reimagine cities most of all his beloved New York freed from their obligation to cars Eventually he found he was not alone Since the turn of the twenty first century a surreptitious revolution has taken place every year Americans are driving fewer miles And the generation named for this new century the Millennials are driving least of all Not because they can't afford to they don't want to They have better ideas for how to use their streets An urban transformation is underway and smart streets are at the heart of it They will boost property prices and personal fitness roll back years of congestion and smog and offer a transformative experience of American urban life From San Francisco to Salt Lake Charleston to Houston the American city is becoming a better and better place to be Schwartz's *Street Smart* is a dazzling and affectionate history of the struggle for control of American cities and an inspiring off road map to a more vibrant active and vigorous urban future

Waiting for Robots Antonio A. Casilli, 2025-01-08 An essential investigation that pulls back the curtain on automation like AI to show human workers hidden labor Artificial Intelligence fuels both enthusiasm and panic Technologists are inclined to give their creations leeway pretend they're animated beings and consider them efficient As users we may complain when these technologies don't obey or worry about their influence on our choices and our livelihoods And yet we also yearn for their convenience see ourselves reflected in them and treat them as something entirely new But when we overestimate the automation of these tools award winning author Antonio A Casilli argues we fail to recognize how our fellow humans are essential to their efficiency The danger is not that robots will take our jobs but that humans will have to do theirs In this bracing and powerful book Casilli uses up to the minute research to show

how today's technologies including AI continue to exploit human labor even ours. He connects the diverse activities of today's tech laborers, platform workers like Uber drivers and Airbnb hosts, micro workers including those performing atomized tasks like data entry on Amazon Mechanical Turk, and the rest of us as we evaluate text or images to show we're not robots, react to Facebook posts, or approve or improve the output of generative AI. As Casilli shows us, algorithms, search engines, and voice assistants wouldn't function without unpaid or underpaid human contributions. Further, he warns that if we fail to recognize this human work, we risk a dark future for all human labor. *Waiting for Robots* urges us to move beyond the simplistic notion that machines are intelligent and autonomous. As the proverbial *Godot*, robots are the bearers of a messianic promise that is always postponed. Instead of bringing prosperity for all, they discipline the workforce so we don't dream of a world without drudgery and exploitation. Casilli's eye-opening book makes clear that most automation requires human labor and likely always will, shedding new light on today's consequences and tomorrow's threats of failing to recognize and compensate the click workers of today.

Photography After Capitalism Ben Burbridge, 2020-12-15 A polemical analysis of the politics and economics of today's vernacular photographic cultures. In *Photography After Capitalism*, Benedict Burbridge makes the case for a radically expanded conception of photography encompassing the types of labor too often obscured by black-boxed technologies, slick platform interfaces, and the compulsion to display lives to others. His lively and polemical analysis of today's vernacular photographic cultures shines new light on the hidden work of smartphone assembly teams, digital content moderators, Street View car drivers, Google Scan Ops, low-paid gallery interns, homeless participant photographers, and the photo-sharing masses. Bringing together cultural criticism, social history, and political philosophy, Burbridge examines how representations of our photographic lives in advertising, journalism, scholarship, and particularly contemporary art shape a sense of what photography is and the social relations that comprise it. More precisely, he focuses on how different critical and creative strategies, from the appropriation of social media imagery to performative traversals of the network, from documentaries about secretive manual labor to science-fiction fantasies of future sabotage, affect our understanding of photography's interactions with political and economic systems. Drawing insight and inspiration from recent analyses of digital labour, community economies, and post-capitalism, Burbridge harnesses the ubiquity of photography to cognitively map contemporary capitalism in search of its weak spots and levers, sites of resistance and opportunities to build better worlds.

Geomedia Scott McQuire, 2017-05-23 Geomedia offers critical analysis of the new possibilities and power relations emerging in the public space of contemporary cities. As ubiquitous digital networks enable embedded and mobile devices to integrate place-specific data with real-time feedback circuits, everyday experience of public space has become subject to new demands. Looking beyond debates framed by the dominance of surveillance and spectacle, McQuire asks how might the kind of collaborative practices that have flourished in art and online cultures be translated into urban space. In the urban crisis of the 1960s, Henri Lefebvre argued that the capacity for a city's inhabitants to actively appropriate the time and space of their

surroundings was a critical dimension of modern democracy What does it mean to speak of the right to the city in the context of the networked city Addressing this question through a series of case studies this cutting edge text highlights the tensions between citizen and consumer communication and surveillance participation and control which define contemporary struggles over public space
