Google Hacker:

Google Hacks Rael Dornfest, Paul Bausch, Tara Calishain, 2006-08-03 Everyone knows that Google lets you search billions of web pages. But few people realize that Google also gives you hundreds of cool ways to organize and play with information. Since we released the last edition of this bestselling book, Google has added many new features and services to its expanding universe: Google Earth, Google Talk, Google Maps, Google Blog Search, Video Search, Music Search, Google Base, Google Reader, and Google Desktop among them. We've found ways to get these new services to do even more. The expanded third edition of *Google Hacks* is a brand new and infinitely more useful book for this powerful search engine. You'll not only find dozens of hacks for the new Google services but plenty of updated tips, tricks, and scripts for hacking the old ones. Now you can make a Google Earth movie, visualize your web site traffic with Google Analytics, post pictures to your blog with Picasa, or access Gmail in your favorite email client. Industrial strength and real world tested: this new collection enables you to mine a ton of information within Google's reach. And have a lot of fun while doing it. Search Google over IM with a Google Talk bot. Build a customized Google Map and add it to your own web site. Cover your searching tracks and take back your browsing privacy. Turn any Google query into an RSS feed that you can monitor in Google Reader or the newsreader of your choice. Keep tabs on blogs in new useful ways. Turn Gmail into an external hard drive for Windows, Mac, or Linux. Beef up your web pages with search ads, news feeds, and more. Program Google with the Google API and language of your choice. For those of you concerned about Google as an emerging Big Brother, this new edition also offers advice and concrete tips for protecting your privacy. Get into the world of Google and bend it to your will. [Googling Security](#) Greg Conti, 2008-10-10 What Does Google Know about You? And Who Are They Telling? When you use Google's free services, you pay big time with personal information about yourself. Google is making a fortune on what it knows about you, and you may be shocked by just how much Google does know. *Googling Security* is the first book to reveal how Google's vast information stockpiles could be used against you or your business, and what you can do to protect yourself. Unlike other books on Google hacking, this book covers information you disclose when using all of Google's top applications, not just what savvy users can retrieve via Google's search results. West Point computer science professor Greg Conti reveals the privacy implications of Gmail, Google Maps, Google Talk, Google Groups, Google Alerts, Google's new mobile applications, and more. Drawing on his own advanced security research, Conti shows how Google's databases can be used by others with bad intent, even if Google succeeds in its pledge of "don't be evil." Uncover the trail of informational bread crumbs you leave when you use Google search. How Gmail could be used to track your personal network of friends, family, and acquaintances. How Google's map and location tools could disclose the locations of your home, employer, family, and friends' travel plans and intentions. How the information stockpiles of Google and other online companies may be spilled, lost, taken, shared, or subpoenaed and later used for identity theft or even blackmail. How the Google AdSense and DoubleClick advertising services could track you around the Web. How to

systematically reduce the personal information you expose or give away This book is a wake up call and a how to self defense manual an indispensable resource for everyone from private citizens to security professionals who relies on Google Preface xiii Acknowledgments xix About the Author xxi Chapter 1 Googling 1 Chapter 2 Information Flows and Leakage 31 Chapter 3 Footprints Fingerprints and Connections 59 Chapter 4 Search 97 Chapter 5 Communications 139 Chapter 6 Mapping Directions and Imagery 177 Chapter 7 Advertising and Embedded Content 205 Chapter 8 Googlebot 239 Chapter 9 Countermeasures 259 Chapter 10 Conclusions and a Look to the Future 299 Index 317 Google Hacking for Penetration Testers Bill Gardner,Johnny Long,Justin Brown,2011-04-18 This book helps people find sensitive information on the Web Google is one of the 5 most popular sites on the internet with more than 380 million unique users per month Nielsen NetRatings 8 05 But Google s search capabilities are so powerful they sometimes discover content that no one ever intended to be publicly available on the Web including social security numbers credit card numbers trade secrets and federally classified documents Google Hacking for Penetration Testers Volume 2 shows the art of manipulating Google used by security professionals and system administrators to find this sensitive information and self police their own organizations Readers will learn how Google Maps and Google Earth provide pinpoint military accuracy see how bad guys can manipulate Google to create super worms and see how they can mash up Google with MySpace LinkedIn and more for passive reconnaissance Learn Google Searching BasicsExplore Google s Web based Interface build Google queries and work with Google URLs Use Advanced Operators to Perform Advanced QueriesCombine advanced operators and learn about colliding operators and bad search fu Learn the Ways of the Google HackerSee how to use caches for anonymity and review directory listings and traversal techniques Review Document Grinding and Database DiggingSee the ways to use Google to locate documents and then search within the documents to locate information Understand Google s Part in an Information Collection FrameworkLearn the principles of automating searches and the applications of data mining Locate Exploits and Finding TargetsLocate exploit code and then vulnerable targets See Ten Simple Security SearchesLearn a few searches that give good results just about every time and are good for a security assessment Track Down Web ServersLocate and profile web servers login portals network hardware and utilities See How Bad Guys Troll for DataFind ways to search for usernames passwords credit card numbers social security numbers and other juicy information Hack Google ServicesLearn more about the AJAX Search API Calendar Blogger Blog Search and more Hacking Google for Education Brad Currie,Billy Krakower,Scott Rocco,2017 Google It means more than you think What if you could leverage the full potential of Google for Education Google Classroom Google Docs and Google Apps are changing how we teach learn and lead and now more than ever teachers principals and district administrators must understand the power and role of Google in their spaces Google Apps for Education has something for everyone G Suite Google Drive Apps Docs Gmail and all Google Tools is changing the landscape of progressive technology driven schools at a rapid pace that can be daunting Google gurus Brad Currie Billy
