Interactive Sketch-based Interfaces and Modelling for Design Alexandra Bonnici,Kenneth P. Camilleri,2023-05-31 Sketching is a natural and intuitive communication tool used for expressing concepts and ideas that are difficult to communicate through text or speech alone In design applications drawings are used at various stages of the design process from the early concept drawings scribbled on a piece of paper to immersive interactions in which users manipulate and adjust the 3D form of an object in virtual or augmented reality environments This variety in drawing activities brings about the need for different interpretation strategies that support not only the sketching activity itself but also allow sketch based interactions such as sketch based queries to take place In this book we explore the different drawing approaches used in design and the algorithms required for processing and interpreting the different sketches and drawings in design The book is divided into two parts The first part focuses on sketching in the 2D domain This includes the digitization of offline and paperbased sketches techniques for online sketch recognition observations of user drawing habits algorithms for inferring depth from 2D drawings as well as non photorealistic rendering techniques that are then applied to sketch based queries The second part of the book focuses on 3D sketching in virtual or augmented reality spaces Here we present the processing and rendering of the 3D strokes the different interaction devices available for 3D sketching and look at different applications where immersive 3D sketching has been applied with success *The Routledge Handbook of Corpus Linguistics* Anne O'Keeffe,Michael J. The Death of Drawing David Scheer, 2014-06-05 The Death of Drawing explores the causes and effects of the epochal shift from drawing to computation as the chief design and communication medium in architecture Drawing both framed the thinking of architects and organized the design and construction process to place architects at its center Its displacement by building information modeling BIM and computational design recasts both the terms in which architects think and their role in building production Author David Ross Scheer explains that whereas drawing allowed architects to represent ideas in form BIM and computational design simulate experience making building behavior or performance the primary object of design The author explores many ways in which this displacement is affecting architecture the dominance of performance criteria in the evaluation of design decisions the blurring of the separation of design and construction the undermining of architects authority over their projects by automated information sharing the elimination of the human body as the common foundation of design and experience the transformation of the meaning of geometry when it is performed by computers the changing nature of design when it requires computation or is done by a digitally enabled collaboration Throughout the book Scheer examines both the theoretical bases and the practical consequences of these changes The Death of Drawing is a clear eyed account of the reasons for and consequences of the displacement of drawing by computational media in architecture Its aim is to give architects the ability to assess the impact of digital media on their own work and to see both the challenges and opportunities of this historic moment in the history of their discipline
