Graded Ring Theory F Van Oystaeyen:

Graded Ring Theory C. Nastasescu, F. Van Oystaeyen, 2011-08-18 This book is aimed to be a technical book on graded rings By technical we mean that the book should supply a kit of tools of quite general applicability enabling the reader to build up his own further study of non commutative rings graded by an arbitrary group The body of the book Chapter A contains categorical properties of graded modules localization of graded rings and modules Jacobson radicals of graded rings the structure theory for simple objects in the graded sense chain conditions Krull dimension of graded modules homogenization homological dimension primary decomposition and more One of the advantages of the generality of Chapter A is that it allows direct applications of these results to the theory of group rings twisted and skew group rings and crossed products With this in mind we have taken care to point out on several occasions how certain techniques may be specified to the case of strongly graded rings We tried to write Chapter A in such a way that it becomes suitable for an advanced course in ring theory or general algebra we strove to make it as selfcontained as possible and we included several problems and exercises Other chapters may be viewed as an attempt to show how the general techniques of Chapter A can be applied in some particular cases e g the case where the gradation is of type $\mathbb{Z}$ In compiling the material for Chapters B and C we have been guided by our own research interests Chapter 6 deals with commutative graded rings of type 2 and we focus on two main topics arithmetically graded domains and secondly local conditions for Noetherian rings In Chapter C we derive some structural results relating to the graded properties of the rings considered The following classes of graded rings receive special attention fully bounded Noetherian rings birational extensions of commutative rings rings satisfying polynomial identities and Von Neumann regular rings Here the basic idea is to derive results of ungraded nature from graded information Some of these sections lead naturally to the study of sheaves over the projective spectrum $\text{Proj } R$ of a positively graded ring but we did not go into these topics here We refer to [125] for a noncommutative treatment of projective geometry in the geometry of graded PI algebras

Brauer Groups and the Cohomology of Graded Rings Stefaan Caenepeel, 2020-08-26 This book introduces various notions defined in graded terms extending the notions most frequently used as basic ingredients in the theory of Azumaya algebras separability and Galois extensions of commutative rings crossed products and Galois cohomology Picard groups and the Brauer group

Graded Rings and Graded Grothendieck Groups Roozbeh Hazrat, 2016-05-26 This study of graded rings includes the first systematic account of the graded Grothendieck group a powerful and crucial invariant in algebra which has recently been adopted to classify the Leavitt path algebras The book begins with a concise introduction to the theory of

graded rings and then focuses in more detail on Grothendieck groups Morita theory Picard groups and K theory The author extends known results in the ungraded case to the graded setting and gathers together important results which are currently scattered throughout the literature The book is suitable for advanced undergraduate and graduate students as well as researchers in ring theory Ring Theory - Proceedings Of The Biennial Ohio State-denison Conference 1992 Surender K

Jain,Syed Tariq Rizvi,1993-09-30 This volume consists of a collection of invited papers on the theory of rings and modules most of which were presented at the biennial Ohio State Denison Conference May 1992 in memory of Hans Zassenhaus The topics of these papers represent many modern trends in Ring Theory The wide variety of methodologies and techniques demonstrated will be valuable in particular to young researchers in the area Covering a broad range this book should appeal to a wide spectrum of researchers in algebra and number theory Noncommutative Algebra and Geometry Corrado De

Module Categories and Nonlinear Equations Stefaan Caenepeel,Gigel Militaru,Shenglin Zhu,2004-10-13 Doi Koppinen Hopf modules and entwined modules unify various kinds of modules that have been intensively studied over the past decades such as Hopf modules graded modules Yetter Drinfeld modules The book presents a unified theory with focus on categorical concepts generalizing the notions of separable and Frobenius algebras and discussing relations with smash products Galois theory and descent theory Each chapter of Part II is devoted to a particular nonlinear equation The expos is organized in such a way that the analogies between the four are clear the quantum Yang Baxter equation is related to Yetter Drinfeld modules the pentagon equation to Hopf modules and the Long equation to Long dimodules The Frobenius separability equation provides a new viewpoint to Frobenius and separable algebras *Rings, Groups, and Algebras* X. Ring Theory Jose L. Bueso,Pascual Jara,Blas Torrecillas,2007-01-05 The papers in this proceedings volume are selected research papers in different areas of ring theory including graded rings differential operator rings K theory of noetherian rings torsion theory regular rings cohomology of algebras local cohomology of noncommutative rings The book will be important for mathematicians active in research in ring theory **Brauer Groups, Hopf Algebras and Galois Theory**

Stefaan Caenepeel,2002-03-31 This volume is devoted to the Brauer group of a commutative ring and related invariants Part I presents a new self contained exposition of the Brauer group of a commutative ring Included is a systematic development of

the theory of Grothendieck topologies and étale cohomology and discussion of topics such as Gabber's theorem and the theory of Taylor's big Brauer group of algebras without a unit Part II presents a systematic development of the Galois theory of Hopf algebras with special emphasis on the group of Galois objects of a cocommutative Hopf algebra The development of the theory is carried out in such a way that the connection to the theory of the Brauer group in Part I is made clear Recent developments are considered and examples are included The Brauer Long group of a Hopf algebra over a commutative ring is discussed in Part III This provides a link between the first two parts of the volume and is the first time this topic has been discussed in a monograph Audience Researchers whose work involves group theory The first two parts in particular can be recommended for supplementary graduate course use Lattices, Semigroups, and Universal Algebra Jorge Almeida, Gabriela Bordalo, Philip Dwinger, 2013-11-11 This volume contains papers which for the most part are based on talks given at an international conference on Lattices Semigroups and Universal Algebra that was held in Lisbon Portugal during the week of June 20-24 1988 The conference was dedicated to the memory of Professor Antonio Almeida Costa a Portuguese mathematician who greatly contributed to the development of the algebra in Portugal on the 10 anniversary of his death The themes of the conference reflect some of his research interests and those of his students The purpose of the conference was to gather leading experts in Lattices Semigroups and Universal Algebra and to promote a discussion of recent developments and trends in these areas All three fields have grown rapidly during the last few decades with varying degrees of interaction Lattice theory and Universal Algebra have historically evolved alongside with a large overlap between the groups of researchers in the two fields More recently techniques and ideas of these theories have been used extensively in the theory of semigroups Conversely some developments in that area may inspire further developments in Universal Algebra On the other hand techniques of semigroup theory have naturally been employed in the study of semilattices Several papers in this volume elaborate on these interactions *The Algebraic Structure of Crossed Products* G. Karpilovsky, 1987-05-01 In the past 15 years the theory of crossed products has enjoyed a period of vigorous development The foundations have been strengthened and reorganized from new points of view especially from the viewpoint of graded rings The purpose of this monograph is to give in a self contained manner an up to date account of various aspects of this development in an effort to convey a comprehensive picture of the current state of the subject It is assumed that the reader has had the equivalent of a standard first year graduate course thus familiarity with basic ring theoretic and group theoretic concepts and an understanding of elementary properties of modules tensor products and fields A chapter on algebraic preliminaries is included which briefly surveys topics required later in the book **Rings, Hopf Algebras, and Brauer Groups** Stefaan Caenepeel, 2020-09-29 Based on papers presented at a recent international conference on algebra and algebraic geometry held jointly in Antwerp and Brussels Belgium Presents both survey and research articles featuring new results from the intersection of algebra and geometry **Trends in Ring Theory** Vlastimil Dlab, László Márki, 1998 The Ring Theory

Conference held at the University of Miskolc Hungary successfully accomplished its two goals to reflect contemporary trends in the subject area and to offer a meeting place for a large number of Eastern European algebraists and their colleagues from around the world Particular emphasis was placed on recent developments in the following four areas representation theory group algebras PI algebras and general ring theory This book presents 13 of the invited lectures
