Source Book of Projects ,1981 Math Wars Carmen Latterell,2004-12-30 This book is written for parents and other interested parties so that they can understand the great debate taking place in many states in this country about how to teach basic math The debate centers around the standards written by the National Council of Teachers of Mathematics NCTM which call for a radically different approach to mathematics education Because the issues are so heated between the NCTM oriented curricula and traditional curricula the curricula that NCTM oriented replaced the term Math Wars was coined to describe them Parents are concerned about their children s math learning Teachers are concerned about math teaching When parents see what children are bringing home under the new curriculum it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school But the problem goes beyond grades K 12 Post secondary mathematics courses are the fear of many students The standards created by the NCTM do not necessarily prepare students for success either on SATs or in college Besides lack of knowledge about mathematics education many parents have an additional problem in that they feel they lack knowledge in mathematics itself This is very intimidating thus it is difficult for parents to do anything about the confusing state of mathematics education This book provides some answers Resources in Education ,1999-10 *Yearbook of the National Society for the Study of Education* ,1921 *Yearbook of the National Society for the Study of Education* National Society for the Study of Education,1921

Eron,Sidney L. Rachlin,2015-10-01 Originally published in 2005 This monograph represents the work of many mathematics teacher educators explored the content knowledge and pedagogical knowledge that make up the middle grades learning experience The middle grades remains a unique period of time in students development and as such provides both challenges and promising opportunities for those who prepare teachers of middle grades mathematics This work is the final product of an exciting NSF supported endeavor that gathered leaders in the field and explored curriculum case studies of program models at several institutions as well as issue papers on such key topics as assessment technology and preparing culturally responsive teachers AMTE hopes this

Journal of Educational Method ,1921 *Modern Mathematics* Dirk De Bock,2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

Leading Change Through Evaluation Kristen L. Rohanna,2021-09-08 This book shows why those hoping to use evaluation to drive change in complex systems rather than develop or improve one program policy or product need to shift from the oversimplified idea of formative evaluation to a more specified continuous improvement model grounded in improvement science In doing so author Kristen L Rohanna provides guidance to both evaluators and others such as K 12 educators or hospital administrators who lead improvement initiatives in their organizations and seek to solve persistent problems of practice **Reader's Guide to Periodical Literature Supplement** ,1923 *Mathematics Teachers at Work* Janine T.
