Mathematics For Equity Mathematics For Equity:

Mapping Equity and Quality in Mathematics Education Bill Atweh, Mellony Graven, Walter Secada, Paola Valero, 2011-01-06 Concerns about quality mathematics education are often posed in terms of the types of mathematics that are worthwhile and valuable for both the student and society in general and about how to best support students so that they can develop this mathematics Concerns about equity are about who is excluded from the opportunity to develop quality mathematics within our current practices and systems and about how to remove social barriers that systematically disadvantage those students This collection of chapters summarises our learning about the achievement of both equity and quality agendas in mathematics education and to move forward the debate on their importance for the field New Directions for Equity in Mathematics Education Walter G. Secada, Elizabeth Fennema, Lisa Byrd Adajian, 1995-04-28 This book examines equity from the standpoint of mathematics education an excellent forum for the topic since the results are quantifiable and the disparity in performance is stark **Equity in Mathematics Education** Constantinos Xenofontos, 2019-10-01 Following in the steps of the socio political turn of the discipline Equity in Mathematics Education Addressing a Changing World emerged as a response of the editor and the chapter authors to the enormous changes that have in the last years occurred at a global level for example the ongoing war in Syria the political in actions of powerful nations to fight climate change the rise of far right parties in many countries around the world and so on In recent years massive migration waves from the Middle East have caused significant demographic changes to many European countries Canada and the US that are reflected in schools and classrooms These observations have led this book's contributors to reconsider the concept and or practice of equity and its related concept social justice and the role of mathematics education research in addressing and promoting a fairer world Contrary to other perhaps highly specialized books concerned with similar topics this book aims to provide a smooth yet deep introduction to those who are new to this research area Equity in Mathematics Education Addressing a Changing World contributes to the understanding of equity and its complex relations to mathematics education It is anticipated that it will support individuals in teaching educational research policy making and planning and teacher education in becoming more aware of the interplay between school mathematics and socio political issues that ultimately impacts the lives of learners and their communities teachers as practitioners and as citizens the wider society and the world as a whole Even though each chapter can be read independently of others an engagement with all chapters in this volume will provide readers with a solid holistic understanding of the research territory of equity and mathematics education *Reflecting the World* Mathew D. Felton, Koestler, Ksenija Simic, Muller, José María Menéndez, 2017-02-01 Reflecting the World A Guide to Incorporating Equity in Mathematics Teacher Education is a guide for mathematics teacher educators interested in incorporating equity concerns into their teaching The book draws on the authors research and experience integrating issues of equity diversity and social justice into their work as mathematics

teacher educators of preservice and inservice preK 9 teachers Reflecting the World includes both a framework for integrating issues of equity into mathematics teacher education courses and professional development and example lessons The lessons are organized by content area and include guidance for using them effectively Elementary and middle grades pre service teachers are often uncomfortable with mathematics uncertain about their ability to teach it and unsure of how it connects to the real world For many preservice teachers a focus on the real world and in particular on issues of equity diversity and social justice is more engaging than their past experiences with mathematics and can help lessen their mathematical anxieties Reflecting the World will assist teacher educators in designing and teaching mathematics content and methods courses in ways that support future teachers to see the relevance of mathematics to our world and in becoming critical questioning citizens in an increasingly mathematical world The book provides a set of tools for helping future teachers connect mathematics to the lives interests and political realities of an increasingly diverse student body and in doing so it provides a meaningful answer to the question when will I ever use this

Diversity, Equity, and Mathematical Learning

Nailah Suad Nasir,Paul Cobb,2002-09-12 The articles developed for this special issue of Mathematical Thinking and Learning grew out of a series of two meetings held at Vanderbilt University in November 1999 and Northwestern University in September 2000 As a group the six articles in this special issue have the potential to help us reframe issues of equity in mathematics education and to enrich understandings of the process by which diverse learners experience mathematics education Some of these articles are theoretical in orientation and offer insights to how the sociocultural approach to equity in math education might be developed Other papers rely on close analyses of mathematical learning in and out of the classroom to understand the construction of equity at the micro level of social interactions In sum the articles that make up this special issue take the social and cultural worlds in which mathematics is learned to be central to the understandings of the dynamics of equity The editors hope that the understandings of equity diversity and mathematical learning continue to evolve and that this special issue will serve to spark thought controversy debate and further research on this critically important topic
