Mathematics In Twentieth Century Literature And Art Content Form Meaning:

Mathematics in Twentieth-Century Literature and Art Robert Tubbs, 2014-07-15 Chips away at the notion of an accidental relationship between math and art and literature During the twentieth century many artists and writers turned to abstract mathematical ideas to help them realize their aesthetic ambitions Man Ray Marcel Duchamp and perhaps most famously Piet Mondrian used principles of mathematics in their work Was it mere coincidence or were these artists simply following their instincts which in turn were ruled by mathematical underpinnings such as optimal solutions for filling a space If math exists within visual art can it be found within literary pursuits In short just what is the relationship between mathematics and the creative arts In this provocative original exploration of mathematical ideas in art and literature Robert Tubbs argues that the links are much stronger than previously imagined and exceed both coincidence and commonality of purpose Not only does he argue that mathematical ideas guided the aesthetic visions of many twentieth century artists and writers Tubbs further asserts that artists and writers used math in their creative processes even though they seemed to have no affinity for mathematical thinking In the end Tubbs makes the case that art can be better appreciated when the math that inspired it is better understood An insightful tour of the great masters of the last century and an argument that challenges long held paradigms *Mathematics in Twentieth Century Literature and Art* will appeal to mathematicians humanists and artists as well as instructors teaching the connections among math literature and art

the modernist writer James Joyce was influenced by the radical theories of non Euclidean geometry Tracing Joyce s obsession with measuring and mapping space throughout his works Ciaran McMorran delves into a major theme in Joyce s work that has not been thoroughly explored until now *Scouting and Scoring* Christopher J. Phillips,2021-03-30 An in depth look at the intersection of judgment and statistics in baseball Scouting and scoring are considered fundamentally different ways of ascertaining value in baseball Scouting seems to rely on experience and intuition scoring on performance metrics and statistics In *Scouting and Scoring* Christopher Phillips rejects these simplistic divisions He shows how both scouts and scorers rely on numbers bureaucracy trust and human labor to make sound judgments about the value of baseball players Tracing baseball s story from the nineteenth century to today Phillips explains that the sport was one of the earliest fields to introduce numerical analysis and new methods of data collection were supposed to enable teams to replace scouting with scoring But that s not how things turned out From the invention of official scorers and Statcast to the creation of the Major League Scouting Bureau *Scouting and Scoring* reveals the inextricable connections between human expertise and data science and offers an entirely fresh understanding of baseball **Mathematics in Postmodern American Fiction** Stuart

J. Taylor,2024-04-23 This book delivers an innovative critical approach to better understand U S fiction of the information age and argues that in the last eighty years fiction has become increasingly concerned with its representations of mathematical ideas images and practices In so doing this book provides a fuller transnational account of the place of mathematics in understanding mathematically informed novels Literature and science studies have acknowledged and situated historical points of cultural crossover by emphasising mathematics within this larger intellectual context and not as an unlikely and alien adjunct to post war culture this monograph clarifies how mathematically informed postmodern fictions work in a cognate fashion to other fields undergoing structuralist revolutions This is especially evident in fiction by the key mathematically literate Postmodern authors upon whom this study focuses namely Thomas Pynchon Don DeLillo and David Foster Wallace through which recent the technological revolutions facilitated by mathematics manifest in cultural discourse

Possibilities of Lyric Manuele Gragnolati,Francesca Southerden,2020-11-17 Opening to passion as an unsettling transformative force extending desire to the text expanding the self and dissolving its boundaries imagining pleasures outside the norm and intensifying them overcoming loss and reaching beyond death being loyal to oneself and defying productivity resolution and cohesion while embracing paradox non linearity incompleteness These are some of the possibilities of lyric that this book explores by reading Petrarch s vernacular poetry in dialogue with that of other poets including Guido Cavalcanti Dante and Shakespeare In the Epilogue the poet Antonella Anedda Angioy engages with Ossip Mandelstam and Paul Celan s dialogue with Petrarch and extends it into the present *The Palgrave Handbook of Literature and Mathematics* Robert Tubbs,Alice Jenkins,Nina Engelhardt,2020-12-30 This handbook features essays written by both literary scholars and mathematicians that examine multiple facets of the connections between literature and mathematics These

connections range from mathematics and poetic meter to mathematics and modernism to mathematics as literature. Some chapters focus on a single author such as mathematics and Ezra Pound, Gertrude Stein or Charles Dickens while others consider a mathematical topic common to two or more authors such as squaring the circle, chaos theory, Newton's calculus or stochastic processes. With appeal for scholars and students in literature, mathematics, cultural history and history of mathematics, this important volume aims to introduce the range, fertility and complexity of the connections between mathematics, literature and literary theory.
