Building the Foundation: Whole Numbers in the Primary Grades Maria G. Bartolini Bussi, Xu Hua Sun, 2018-03-29 This twenty third ICMI Study addresses for the first time mathematics teaching and learning in the primary school and pre school setting while also taking international perspectives socio cultural diversity and

institutional constraints into account One of the main challenges of designing the first ICMI primary school study of this kind is the complex nature of mathematics at the early level Accordingly a focus area that is central to the discussion was chosen together with a number of related questions The broad area of Whole Number Arithmetic WNA including operations and relations and arithmetic word problems forms the core content of all primary mathematics curricula The study of this core content area is often regarded as foundational for later mathematics learning However the principles and main goals of instruction on the foundational concepts and skills in WNA are far from universally agreed upon and practice varies substantially from country to country As such this study presents a meta level analysis and synthesis of what is currently known about WNA providing a useful base from which to gauge gaps and shortcomings as well as an opportunity to learn from the practices of different countries and contexts

Effectiveness of teachers' guides in the Global South Benjamin Piper, Yasmin Sitabkhan, Jessica Mejia, Kellie Betts, 2018-05-10 This report presents the results of RTI International Education's study on teachers guides across 13 countries and 19 projects Using quantitative and qualitative methods we examine how teachers guides across the projects differ and find substantial variation in the design and structure of the documents We develop a scripting index so that the scripting levels of the guides can be compared across projects The impact results of the programs that use teachers guides show significant impacts on learning outcomes associated with approximately an additional half year of learning showing that structured teachers guides contribute to improved learning outcomes During observations we find that teachers make a variety of changes in their classroom instruction from how the guides are written showing that the utilization of structured teachers guides do not create robotic teachers unable to use their own professional skills to teach children Unfortunately many changes that teachers make reduce the amount of group work and interactivity that was

described in the guides suggesting that programs should encourage teachers to more heavily utilize the instructional routines designed in the guide. The report includes a set of research based guidelines that material developers can use to develop teachers guides that will support effective instructional practices and help improve learning outcomes. The key takeaway from the report is that structured teachers guides improve learning outcomes but that overly scripted teachers guides are somewhat less effective than simplified teachers guides that give specific guidance to the teacher but are not written word for word for each lesson in the guide.

Non-State Actors in Education in the Global South, Prachi Srivastava, Geoffrey Walford, 2019-10-23. Fuelled by social equity concerns, there have been vigorous debates on the appropriateness of certain non state actors, particularly those with commercial and entrepreneurial motives, to meet universal education goals. There are further questions on the relative effectiveness of government and private schooling in delivering good learning outcomes for all. Within this debate, several empirical questions abound: Do students from poorer backgrounds achieve as well in private schools as their advantaged peers? What are the relative out of pocket costs of accessing private schooling compared to government schooling? Is fee paying non state provision affordable to the poorest households? What is the nature of the education market at different levels? What are the relationships between different non state actors and the

state and how should they conduct themselves The chapters in this volume present new empirical evidence and conduct critical analysis on some of these questions This book was originally published as a special issue of the Oxford Review of Education
