## Mathématiques Supérieures:

Mathématiques supérieures - Cours - Tome 1 Alexander Gewirtz, 2023-03-23T00:00:00+01:00 L'objectif de ce premier tome est d'introduire tous les fondements d'algèbre, les structures d'algèbre linéaire, les espaces vectoriels et applications linéaires et d'analyser les concepts de limite en particulier pour les suites ou les fonctions. La volonté de ne pas se limiter à l'algèbre et à l'analyse en deux tomes différents s'inscrit dans une démarche pédagogique visant à briser l'idée que ces domaines sont disjointes et comprendre que des techniques algébriques peuvent s'appliquer pour des questions d'analyse et réciproquement. Ce livre a été rédigé comme support de cours pour les étudiants de l'IFCEN mais aussi comme outil de travail pour des élèves de classes préparatoires ou de premier cycle universitaire. Il pourra d'ailleurs également intéresser les candidats aux concours de recrutement des enseignants. Ainsi les prérequis pour chaque chapitre sont explicitement donnés, les preuves des propriétés sont complètes et très détaillées, de nombreux exemples et exercices d'applications directes sont donnés et enfin de nombreux points mathématiques sont indiqués. En complément, une large sélection d'exercices de difficulté variable est proposée à la fin de chaque chapitre permettant ainsi de pratiquer ce qui a été appris et proposant parfois une ouverture sur des sujets plus avancés. Enfin, certains chapitres proposent également une annexe avec des compléments pour les étudiants désireux d'approfondir leurs connaissances en mathématiques. Ce livre est inspiré des cours de mathématiques proposés à l'institut franco-chinois de l'énergie nucléaire IFCEN situé à Zhuhai dans la province du Guangdong en Chine.
