

A car, 4.4 metres long, has a fuel tank which holds 65 litres of fuel when full.
The fuel tank of a mathematically similar model of the car holds 0.05 litres of fuel when full.

Calculate the length of the model car in centimetres.

scale factor $\leftarrow 4.4 \text{ m} \rightarrow$ volume factor
 $x \text{ m} \rightarrow 0.05 \text{ l}$

volume factor $= K^3 = \frac{65}{0.05} = 1300 \rightarrow K = \sqrt[3]{1300}$

$K = \frac{4.4 \text{ m}}{x \text{ cm}} = \frac{440}{x} \rightarrow x = \frac{440}{\sqrt[3]{1300}} = 40.3$

Answer 40.3 cm [3]

10

A, B, C, D and E are points on a circle.
Angle ABD = 58° , angle BAE = 85° and angle BDC = 19° .
BD and CA intersect at N.

Calculate

(a) angle BDE.

$180^\circ - 85^\circ = 95^\circ$

Answer(a) Angle BDE = 95 [1]

(b) angle AND.

$\angle CNB = 180^\circ - 58^\circ - 19^\circ = 103^\circ$

$\angle AND = 180^\circ - 103^\circ = 77^\circ$

Answer(b) Angle AND = 77 [2]

Counterparty Risk and Funding Stéphane Crépey, Tomasz R. Bielecki, Damiano Brigo, 2014-06-23. Solve the DVA FVA Overlap Issue and Effectively Manage Portfolio Credit Risk. Counterparty Risk and Funding: A Tale of Two Puzzles explains how to study risk embedded in financial transactions between the bank and its counterparty. The authors provide an analytical basis for the quantitative methodology of dynamic valuation mitigation and hedging of bilateral counterparty risk on over the counter OTC derivative contracts under funding constraints. They explore credit debt funding liquidity and rating valuation adjustment CVA DVA FVA LVA and RVA as well as replacement cost RC wrong way risk multiple funding curves and collateral. The first part of the book assesses today's financial landscape including the current multi curve reality of financial markets. In mathematical but model free terms the second part describes all the basic elements of the pricing and hedging framework. Taking a more practical slant the third part introduces a reduced form modeling approach in which the risk of default of the two parties only shows up through their default intensities. The fourth part addresses counterparty risk on credit derivatives through dynamic copula models. In the fifth part the authors present a credit migrations model that allows you to account for rating dependent credit support annex CSA clauses. They also touch on nonlinear FVA computations in credit portfolio models. The final part covers classical tools from stochastic analysis and gives a brief introduction to the theory of Markov copulas. The credit crisis and

ongoing European sovereign debt crisis have shown the importance of the proper assessment and management of counterparty risk This book focuses on the interaction and possible overlap between DVA and FVA terms It also explores the particularly challenging issue of counterparty risk in portfolio credit modeling Primarily for researchers and graduate students in financial mathematics the book is also suitable for financial quants managers in banks CVA desks and members of supervisory bodies

Mathematical Intelligence Mubeen Junaid,2022-11-01 A fresh exploration into the human nature versus technology argument revealing an unexpected advantage that humans have over our future robot masters we re actually good at mathematics There s so much discussion about the threat posed by intelligent machines that it sometimes seems as though we should simply surrender to our robot overlords now But Junaid Mubeen isn t ready to throw in the towel just yet As far as he is concerned we have the creative edge over computers because of a remarkable system of thought that humans have developed over the millennia It s familiar to us all but often badly taught in schools and misrepresented in popular discourse math Computers are of course brilliant at totting up sums

pattern seeking and performing mindless tasks of well computation For all things calculation machines reign supreme But Junaid identifies seven areas of intelligence where humans can retain a crucial edge And in exploring these areas he opens up a fascinating world where we can develop our uniquely human mathematical talents Just a few of the fascinating subjects covered in MATHEMATICAL INTELLIGENCE include Humans are endowed with a natural sense of numbers that is based on approximation rather than precise calculation Our in built estimation skills complement the precision of computers Interpreting the real world depends on both What sets humans apart from other animals is language and abstraction We have an extraordinary ability to create powerful representations of knowledge more diverse than the binary language of computers Mathematics confers the most robust logical framework for establishing permanent truths Reasoning shields us from the dubious claims of pure pattern recognition systems All mathematical truths are derived from a starting set of assumptions or axioms Unlike computers humans have the freedom to break free of convention and examine the logical consequences of our choices Mathematics rewards our imagination with fascinating and on occasion applicable concepts that originate from breaking the rules Computers can be tasked to solve a range of problems but which problems are worth the effort Questioning is as vital to our repertoire of thinking skills as problem solving itself [EHF Science Olympiad Solved Question Paper Class 8 \(2014\)](#) EHF Learning Media Pvt Ltd, Top 10 teachers, This will help the aspirants to assess the pattern of the real examination paper practice and prepare for cracking the top ranks **The New Business Road Test** John Mullins, 2017-12-20 ROAD TEST YOUR IDEA BEFORE YOU LAUNCH YOUR LEAN START UP Thinking about starting a new business Stop Is there a genuine market for your idea Do you really want to compete in that industry Are you the right person to pursue it No matter how talented you are or how much capital you have if you re pursuing a fundamentally flawed opportunity then you re heading for failure So before you launch your lean start up take your idea for a test drive and make sure it has a fighting chance of working Now in its 4th Edition The New Business Road Test is the essential handbook for anyone wanting to launch a start up The new and fully updated case studies Ella s Kitchen Whole Foods eBay and more and seven domains framework will help you avoid impending disaster and enhance your chances of achieving your entrepreneurial dreams This book will help you answer the live or die questions Are the market and industry attractive Does the opportunity offer both customer benefits as well as competitive and economic sustainability Can you deliver the results you seek The full text downloaded to your computer With eBooks you can search for key concepts words and phrases make highlights and notes as you study share your notes with friends eBooks are downloaded to your computer and accessible either offline through the Bookshelf available as a free download available online and also via the iPad and Android apps Upon purchase you ll gain instant access to this eBook Time limit The eBooks products do not have an expiry date You will continue to access your digital ebook products whilst you have your Bookshelf installed *Learning from Singapore* Pak Tee Ng, 2017-01-12 Learning from Singapore tells the inside story of the country s journey in transforming its education system

from a struggling one to one that is hailed internationally as effective and successful. It is a story not of the glory of international test results but of the hard work and tenacity of a few generations of policy makers, practitioners and teacher trainers. Despite its success, Singapore continues to reform its education system and is willing to deal with difficult issues and challenges of change. Citing Singapore's transformation, author Pak Tee Ng highlights how context and culture affect education policy formulation and implementation. Showing how difficult education reform can be when a system needs to negotiate between competing philosophies, significant trade-offs or paradoxical positions, this book explores the successes and struggles of the Singapore system and examines its future direction and areas of tension. The book also explores how national education systems can be strengthened by embracing the creative tensions generated by paradoxes such as the co-existence of timely change and timeless constants, centralisation and decentralisation, meritocracy and compassion, and teaching less and learning more. Learning from Singapore brings to the world the learning from Singapore; what Singapore has learned from half a century of educational change and encourages every education system to bring hope to and secure a future for the next generation.

Network Games, Control, and Optimization Jean Walrand, Quanyan Zhu, Yezekael Hayel, Tania Jimenez, 2019-02-07. This contributed volume offers a collection of papers presented at the 2018 Network Games Control and Optimization conference NETGCOOP held at the New York University Tandon School of Engineering in New York City, November 14-16, 2018. These papers highlight the increasing importance of network control and optimization in many networking application domains such as mobile and fixed access networks, computer networks, social networks, transportation networks, and more recently, electricity grids and biological networks. Covering a wide variety of both theoretical and applied topics in the areas listed above, the authors explore several conceptual and algorithmic tools that are needed for efficient and robust control, operation, performance optimization, and better understanding of the relationships between entities that may be acting cooperatively or selfishly in uncertain and possibly adversarial environments. As such, this volume will be of interest to applied mathematicians, computer scientists, engineers, and researchers in other related fields.

Identifying, Assessing and Supporting Learners with Dyscalculia Kathleen Kelly, 2020-07-13. Online Resources are open access. No code is required. It is vital to understand the challenges and provide the right support for learners with dyscalculia and specific learning difficulties in mathematics. The book provides an overview of current research explaining the nature and causation of dyscalculia, guidance on the identification of dyscalculia, examples of how to carry out informal and formal assessments, an explanation of the principles of multisensory mathematics teaching, an outline of a structured programme for learners aged 5-14, together with examples of lesson planning and activities. Designed for teachers specialising in the assessment and teaching of learners with dyscalculia and those undertaking courses leading to Approved Teacher, Dyscalculia ATD and Associate Membership of the British Dyslexia Association (AMBDA), the book is useful to any professional looking for an understanding of this area of specific difficulty.
