Preventive Detention of Terror Suspects Diane Webber, 2016-01-08 Preventive detention as a counter terrorism tool is fraught with conceptual and procedural problems and

risks of misuse excess and abuse Many have debated the inadequacies of the current legal frameworks for detention and the need for finding the most appropriate legal model to govern detention of terror suspects that might serve as a global paradigm This book offers a comprehensive and critical analysis of the detention of terror suspects under domestic criminal law the law of armed conflict and international human rights law The book looks comparatively at the law in a number of key jurisdictions including the USA the UK Israel France India Australia and Canada and in turn compares this to preventive detention under the law of armed conflict and various human rights treaties The book demonstrates that the procedures governing the use of preventive detention are deficient in each framework and that these deficiencies often have an adverse and serious impact on the human rights of detainees thereby delegitimizing the use of preventive detention Based on her investigation Diane Webber puts forward a new approach to preventive detention setting out ten key minimum criteria drawn from international human rights principles and best practices from domestic laws The minimum criteria are designed to cure the current flaws and deficiencies and provide a base line of guidance for the many countries that choose to use preventive detention in a way that both respects human rights and maintains security

American public schools Gard and Pluim begin by developing a historical account of the way schools have been used in the public health policy arena in America They then look in detail at more contemporary examples of school based public health policies and initiatives in order to come to a judgment about whether and to what extent it makes sense to use schools in this way With this as the foundation the book then offers answers to the question of why schools have so readily been drawn into public health policy formulations First seeing schools as a kind of miracle factory is a long standing habit of mind that discourages careful consideration of alternative public health strategies Second schools have been implicated in public health policy in strategic ways by actors often with unstated political cultural ideological and financial motivations Finally the authors call for a more sophisticated approach to public health policy in schools and suggest some criteria for judging the potential efficacy of school based interventions In short the potential effectiveness of proposed interventions needs to be assessed not only against existing historical evidence but also against the competing roles society expects schools to play and the working life realities for those charged with implementing public health policies in schools
