Possible Answers and Lesson Tips

Healthy Snack

Students are required to draw an equal number of strawberries and pears on each plate. The amount of strawberries and pears, as long as it is equal, students are required to write a number sentence next to each picture that explains how many strawberries, how many pears and how many pieces of fruit in total.

Example: A student might draw 5 strawberries and 5 pears. The number sentence is $5 + 5 = 10$.

Tip: Discuss the meaning of the word equal and talk about how this might remind students that their drawings on each plate need to be equal, while also reminding them to draw several pieces of fruit. The plus and equals sign are included as an example for students to have to record their number sentence next to their drawings. You may wish to remind your students to include other number sentences.

One Apple

Students are required to write number sentences that have the 1 as the answer.

One Apple

Kelly gave some apples away to her friends at school. She was left with one apple to eat for herself. She wrote down how many she started with, how many she gave away and how many she had left. What number sentences might Kelly have written?

Healthy Snack

For a healthy snack, Mike put some strawberries and some pears on his plate. There was an equal amount of strawberries and pears. What might this look like? Draw a different number on each plate. Write a number sentence to match each picture for how many strawberries, how many pears and how many pieces of fruit in total.

Teaching Mathematics Through Problem-Solving Akihiko Takahashi, 2021-03-31 This engaging book offers an in depth introduction to teaching mathematics through problem solving providing lessons and techniques that can be used in classrooms for both primary and lower secondary grades Based on the innovative and successful Japanese approaches of Teaching Through Problem solving TTP and Collaborative Lesson Research CLR renowned mathematics education scholar Akihiko Takahashi demonstrates how these teaching methods can be successfully adapted in schools outside of Japan TTP encourages students to try and solve a problem independently rather than relying on the format of lectures and walkthroughs provided in classrooms across the world Teaching Mathematics Through Problem Solving gives educators the tools to restructure their lesson and curriculum design to make creative and adaptive problem solving the main way students learn new procedures Takahashi showcases TTP lessons for elementary and secondary classrooms showing how teachers can create their own TTP lessons and units using techniques adapted from Japanese educators through CLR Examples are discussed in relation to the Common Core State Standards though the methods and lessons offered can be used in any country Teaching Mathematics Through Problem Solving offers an innovative new approach to teaching mathematics written by a leading expert in Japanese mathematics education suitable for pre service and in service primary and secondary math educators

Student Voice in Mathematics Classrooms around the World Berinderjeet Kaur, Glenda Anthony, Minoru Ohtani, David Clarke, 2013-09-06 The Learner s Perspective Study ascribes to the premise that the investigation of social practice within the mathematics classrooms must attend to the learners practice with at least the same priority as that accorded to the teachers practice In focusing on student voice within this partnership as enacted in many different guises across different cultures and socio political learning environments we hope that we will be better informed to understand the relationship between pedagogy and learning mathematics and between pedagogy and the empowerment of diverse learners Research findings from the

Learner's Perspective Study reported in this book and its companion volumes affirm just how culturally situated are the practices of classrooms around the world and the extent to which students are collaborators with the teacher complicit in the development and enactment of patterns of participation that reflect individual societal and cultural priorities and associated value systems. In this book we attend closely to this collaboration with our focus on the voice of the student. Collectively the authors consider how the deliberate inclusion of student voice can be used to enhance our understandings of mathematics classrooms of mathematics learning and of mathematics outcomes for students in classrooms around the world. The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants. The LPS research design documents sequences of at least ten lessons using three video cameras supplemented by the reconstructive accounts of classroom participants obtained in post-lesson video stimulated interviews and by test and questionnaire data and copies of student written material. In each participating country data generation focuses on the classrooms of three teachers identified by the local mathematics education community as competent and situated in demographically different school communities within the one major city. The large body of complex data supports both the characterization of practice in the classrooms of competent teachers and the development of theory.
