Powell,Marilyn Frankenstein,1997-04-17 Presents the emerging field of ethnomathematics from a critical perspective challenging particular ways in which Eurocentrism permeates mathematics education and mathematics in general

said what on mathematics **The Publishers Weekly** ,1890 Relatively and Philosophically Earnest Bharath Sriraman, Simon Goodchild, 2009-10-01 Paul Ernest's name is synonymous with social constructivism as a philosophy of mathematics. His contributions to mathematics education have occurred at a very fundamental level and to a extent shaped theory development in this field. His research addresses fundamental questions about the nature of mathematics and how it relates to teaching learning and society. For the last three decades Paul has been a prolific scholar who has published in a wide array of topics such as the relationship between the philosophy of mathematics and mathematics education and more generally the philosophy of mathematics education ethics and values in mathematics education and the philosophy of research methodology. The title of this Festschrift is meant to be a pun to convey the sometimes relativistic dimension to mathematical certainty that Paul argued for in developing his philosophy and also a play on words for the fact that absolute earnestness may perhaps be a Platonic construct and not possible in the realm of language and human discourse. Paul Ernest's scholarly evolution and life can best be summarized in the words of Walt Whitman: Do I contradict myself? Very well then I contradict myself. I am large, I contain multitudes. Indeed his presence has been large and multitudinous and this Festschrift celebrates his 65th Birthday with numerous contributions coming from the mathematics philosophy and mathematics education communities around the world. 3.1416 And All That DAVIS, CHINN, 2012-12-06 LYTTON STRACHEY tells the following story: In intervals of relaxation from his art the painter Degas used to try his hand at writing sonnets. One day while so engaged he found that his inspiration had run dry. In desperation he ran to his friend Mallarmé who was a poet. My poem won't come out he said and yet I'm full of excellent ideas. My dear Degas Mallarmé retorted poetry is not written with ideas it is written with words. If we seek an application of Mallarmé's words to mathematics we find that we shall want to turn his paradox around. We are led to say that mathematics does not consist of formulas it consists of ideas. What is platitudinous about this statement is that mathematics of course consists of ideas. Who but the most unregenerate formalist asserting that mathematics is a meaningless game played with symbols would deny it? What is paradoxical about the statement is that symbols and formulas dominate the mathematical page and so one is naturally led to equate mathematics with its formulas.
