Learning Experiences To Promote Mathematics Learning: Yearbook 2014, Association Of Mathematics Educators
Pee Choon Toh, Tin Lam Toh, Berinderjeet Kaur, 2014-05-27 This sixth volume in the series of yearbooks by the Association of Mathematics Educators in Singapore entitled Learning Experiences to Promote Mathematics Learning is unique in that it focuses on a single theme in mathematics education The objective is for teachers and researchers to advance the learning of mathematics through meaningful experiences Several renowned international and Singapore scholars have published their work in this volume The fourteen chapters of the book illustrate evidence based practices that school teachers and researchers can experiment with in their own classrooms to bring about meaningful learning outcomes Three broad themes namely fundamentals for active and motivated learning learning experiences for developing mathematical processes and use of ICT tools for learning through visualizations simulations and representations shape the ideas in these chapters The book makes a significant contribution towards the learning of mathematics It is a good resource for mathematics teachers educators and research students

Critical Issues in Mathematics Education
Bharath Sriraman, Paul Ernest, Brian Greer, 2009-06-01 The word critical in the title of this collection has three meanings all of which are relevant One meaning as applied to a situation or problem is at a point of crisis A second meaning is expressing adverse or disapproving comments or judgments A third is related to the verb to critique meaning to analyze the merits and faults of The authors contributing to this book pose challenging questions from multiple perspectives about the roles of mathematics in society and the implications for education Traditional reasons for teaching mathematics include preparing a new generation of mathematics researchers and a cadre of technically competent users of mathematics training students to think logically and because mathematics is as much part of cultural heritage as literature or music These reasons remain valid though open to critique but a deeper analysis is required that recognizes the roles of mathematics in framing many

aspects of contemporary society that will connect mathematics education to the lived experiences of students their communities and society in general and that acknowledges the global ethical responsibilities of mathematicians and mathematics educators The book is organized in four sections 1 Mathematics education For what and why 2 Globalization and cultural diversity 3 Mathematics education and society and 4 Social justice in and through mathematics education The chapters address fundamental issues such as the relevance of school mathematics in people s lives creating a sense of agency for the field of mathematics education and redefining the relationship between mathematics as discipline mathematics as school subject and mathematics as part of people s lives

Opening the Research Text Elizabeth de Freitas, Kathleen Nolan, 2007-12-19 In this chapter we interrogate the debate between mathematicians and mathematics educators This debate is widely recognized in the United States for instance where the term math wars is often used in reference to the heated disagreements between mathematicians and mathematics educators Such recognition might suggest that this topic itself has relevance both for the academy and for educational policy pertaining to mathematics education We propose to locate this debate unavoidably whenever and wherever mathematics education is written Our aim is to show how the debate itself gives rise to the inscription mathematics education Indeed we contend that mathematics education cannot be defined outside of or prior to the debate for it is precisely through the debate that it is constituted as a domain for deliberation The debate is more primordial than any epistemic domain implied by it In other words we argue that mathematics and mathematics education do not exist epistemically prior to the debate In order to engage this issue we consider a transcription of a panel debate 2 between mathematicians and mathematics educators held in Brazil in 1998 There is at least a double meaning for the word debate it may mean a meeting having a beginning and an end well localized in space and time and with a specific proposal or focus as in the following sentence I am going to see on TV the debate between Bush and Blair tomorrow at 5 pm

Presenting Children to Maths: Stronger Character for Better Learning David Shattock, 2023-09-22 Mathematics is not a universally popular subject neither within nor outside of school There are those who love it but many do not and it is not uncommon for people to take a perverse pride in being bad at it This book argues that while much needed improvements to mathematics teaching are necessary to address such issues they are insufficient without also imbuing children with the character required to learn it effectively Teachers of mathematics are responsible not only for applying skilful pedagogy but also for developing a productive learning culture within the mathematics classroom We need to consider the emotional and social impact on children of teachers own attitudes and beliefs about mathematics and how children should be taught it Sometimes provocative and irreverent but always stimulating and lucid Presenting Children to Maths is an original and profound discussion about how students ability and success in mathematics depends largely on how their disposition and will are shaped towards learning it
