Maths Olympiad Competition Manual:

The Mathematical Olympiad Handbook Anthony Gardiner, 1997 Mathematical Olympiad competitions started in Hungary at the end of the nineteenth century and are now held internationally They bring together able secondary school pupils who attempt to solve problems which develop their mathematical skills Olympiad problems are unpredictable and have no obvious starting point and although they require only the skills learnt in ordinary school problems they can seem much harder The Mathematical Olympiad Handbook introduces readers to these challenging problems and aims to convince them that Olympiads are not just for a select minority The book contains problems from the first 32 British Mathematical Olympiad BMO papers 1965-96 and gives hints and outline solutions to each problem from 1975 onwards An overview is given of the basic mathematical skills needed and a list of books for further reading is provided Working through the exercises provides a valuable source of extension and enrichment for all pupils and adults interested in mathematics

Irish Mathematical Olympiad Manual J. Cruickshank, G. McGuire, A.G. O'Farrell, D. Redmond, R.O. Watson, D.J. Wraith, 2013-07-29 This Manual was primarily written to assist Irish secondary school students who are preparing to compete in the Irish Mathematical Olympiad held in May each year or the International Mathematical Olympiad held each July It has also proved useful in other countries and is popular among people who simply enjoy mathematics The Mathematical Olympiads are written examinations based on what is called second level mathematics There are significant variations between countries in the content of second level programmes in Mathematics Thus Irish competitors find themselves faced with problems that require background knowledge that is not covered in the Senior Cycle programme for Irish schools In order to have a reasonable chance of success they need to master this material The authors are academics who have many years experience as voluntary trainers of Olympiad contestants and in other mathematical enrichment activities for young people The selection of material is based on this experience
