This machine has left and right steering clutches (1) in the rear footpads.

The clutch lever (2) is connected to the king pin support on the front axle with the rod (3). When turning left or right, the rod connecting to the king pin support on the front axle disengages only the steering clutch of the turn side. This shuts off driving power to the rear wheel on the inside of the turn.

On the other hand, the rear wheel on the outside of the turn has driving torque.
