The Unknown Universe Stuart Clark, 2016-07-05 A groundbreaking guide to the universe and how our latest deep space discoveries are forcing us to revisit what we know and what we don't On March 21 2013 the European Space Agency released a map of the afterglow of the Big Bang Taking in 440 sextillion kilometres of space and 13.8 billion years of time it is physically impossible to make a better map we will never see the early universe in more detail On the one hand such a view is the apotheosis of modern cosmology on the other it threatens to undermine almost everything we hold cosmologically sacrosanct The map contains anomalies that challenge our understanding of the universe It will force us to revisit what is known and what is unknown to construct a new model of our universe This is the first book to address what will be an epoch defining scientific paradigm shift Stuart Clark will ask if Newton's famous laws of gravity need to be rewritten if dark matter and dark energy are just celestial phantoms Can we ever know what happened before the Big Bang What's at the bottom of a black hole Are there universes beyond our own Does time exist Are the once immutable laws of physics changing
