Grand Challenges in Marine Biotechnology Pabulo H. Rampelotto,Antonio Trincone,2018-05-15 This book serves as essential reading for research scientists and biotechnologists from both academia and industry working in marine biotechnology and related disciplines The book discusses recent advances and challenges in terms of science technology innovation and policy for the development of the field and how marine biotechnology may provide new solutions to some of the grand challenges faced by our society Written in an accessible language the book is also recommended as a reference text for decision makers in government and non governmental organizations in their efforts to foster the

development of a global blue economy With less than 5 % of the vast and rich marine environment explored our seas and oceans represent a virtually unexplored resource for the discovery of novel product processes and development of bio inspired synthetic drugs with biotechnological potential As such the marine environment has been considered Earth s last frontier of exploration Recent advances in molecular techniques are providing the necessary tools to access on a larger scale the still untapped ocean resources and consequently unveil the promise of the blue biotechnology Governments are recognizing the potential of marine biotechnology to provide solutions to some of the Grand Challenges of the 21st Century such as sustainable energy and food sources identification of novel drugs for improved health treatments and providing new industrial materials and processes For this reason advances in marine biotechnology may foster the much needed source of innovation and economic growth in many countries and pave the way towards the development of a global blue economy i e a new economic model based on the sustainable exploration of our ocean ecosystems **The Blue Economy** Somnath

Hazra, Anindya Bhukta, 2022-10-13 This volume defines and analyzes the Blue Economy a system that encompasses all the economic activities which are happening in and around the ocean within a sustainable development framework with focus on countries in Asia This work is timely as Blue Economy activities account for a significant share of GDPs in the island and coastal economies in the Asia region sustaining the livelihoods of one of the largest sections of the world s population This book therefore assesses how the Blue Economy contributes to these livelihoods from economic and ecological perspectives and analyzes the various types of ecosystem services provided and how these services are regulated and maintained While most studies of the Blue Economy focus only on the economic aspects this book provides ample statistical data to demonstrate why ecosystem services should additionally be considered for the estimation and valuation of the Blue economy The book is primarily meant for researchers students and teachers in the fields of environmental and ocean economics sustainable development and ecosystem services and will be of further interest to policymakers and government officials working in matters related to the Blue Economy and sustainability policy *Economic value of ecosystem services from the*

scientific research in the deep seas and touristic activities with submersibles to visit sites such as the Titanic shipwreck. Comprehensively the TEV assessed for the deep sea ecosystem as a whole is estimated at USD 267 billion per year. Ninety two percent of the economic value originates from abiotic resources (oil and minerals) 5 percent from biotic resources (fish, corals and pharmaceuticals) of marine origin 2 percent from cultural services (scientific research and tourism recreation) and 1 percent from carbon sequestration.

Developing the Blue Economy Robert C. Brears, 2021-10-20. Traditionally the ocean economy is viewed solely as a mechanism for economic growth. In this business as usual approach large scale industrial economies have developed the ocean economy through the exploitation of maritime and marine resources often without consideration of how those activities impact the future health or productivity of those same resources. This has led to aquatic ecosystems being viewed and treated as limitless resources, the marine environment becoming a dumping ground for waste, overfishing, diminishing fishing stocks, ocean habitats being degraded from coastal developments, sea level rise impacting coastal communities and infrastructure, increasing ocean acidification and the marginalisation of poor coastal communities. Recognising the failings of the traditional ocean economy, there is a transition underway around the world towards the Blue Economy. This concept moves beyond the business as usual approach with economic development and ocean health complementary to one another. In the Blue Economy the environmental risks of and ecological degradation from economic activity are mitigated or significantly reduced. Therefore economic activity is in balance with the long term capacity of the ocean ecosystems to support this activity and remain healthy and resilient. This book will provide an overview of the various technologies used to promote cross sectoral and multi scalar collaboration, facilitate the integrated management of sectors and resources, foster partnerships between governments and industry, encourage R D in new technologies in resource use and management and scale up innovative financing mechanisms in the development of a Blue Economy. Also the book will contain in depth case studies that illustrate how locations of differing climates, lifestyles and income levels have implemented technologies to facilitate the development of the Blue Economy. *Developing the Blue Economy* will provide an accessible resource for practitioners and researchers working in the field on the various innovative technologies being implemented around the world to create a Blue Economy.
