Marine Biotechnology Pabulo H. Rampelotto, Antonio Trincone, 2018-05-15 This book serves as essential reading for research scientists and biotechnologists from both academia and industry working in marine biotechnology and related disciplines The book discusses recent advances and challenges in terms of science technology innovation and policy for the development of the field and how marine biotechnology may provide new solutions to some of the grand challenges faced by our society Written in an accessible language the book is also recommended as a reference text for decision makers in government and non governmental organizations in their efforts to foster the development of a global blue economy With less than 5 % of the vast and rich marine environment explored our seas and oceans represent a virtually unexplored resource for the discovery

of novel product processes and development of bio inspired synthetic drugs with biotechnological potential As such the marine environment has been considered Earth s last frontier of exploration Recent advances in molecular techniques are providing the necessary tools to access on a larger scale the still untapped ocean resources and consequently unveil the promise of the blue biotechnology Governments are recognizing the potential of marine biotechnology to provide solutions to some of the Grand Challenges of the 21st Century such as sustainable energy and food sources identification of novel drugs for improved health treatments and providing new industrial materials and processes For this reason advances in marine biotechnology may foster the much needed source of innovation and economic growth in many countries and pave the way towards the development of a global blue economy i e a new economic model based on the sustainable exploration of our ocean ecosystems

Marine Enzymes for Biocatalysis Antonio Trincone, 2013-09-30 Marine bioprospecting is a highly topical subject in both applied and basic research but as yet the marine ecosystem is a relatively unexplored source of natural bioactive substances with potential therapeutic activity This book addresses the use of marine enzymes in biocatalysis through a series of chapters from leading scientists within academic and industrial fields Biocatalytic processes can take advantage of the habitat related properties of marine enzymes such as salt tolerance hyperthermostability barophilicity cold adaptivity and so on whilst also taking into consideration substrate specificity and affinity These evolved properties are linked to the metabolic functions of the enzymes and to the ecological aspects of the natural source New properties can also be discovered at the molecular level of catalysis particularly concerning the stereochemical characteristics of products Marine enzymes for biocatalysis initially examines the nature and level of interest in marine biological diversity and outlines the fundamentals of biocatalysis It goes on to detail sources of marine enzymes and to analyse examples from both chemical and stereochemical viewpoints of catalysis including microbial enzymes and animal or plant sources The book goes on to explore the future potential of marine bioprospecting in biocatalysis Compiles studies from leading scientists in a direct and accessible format Includes practical descriptions of results adding further details not often covered in formal articles Takes a molecular view which fully explains the enzymatic aspects of reactions particularly regarding biocatalytic characteristics and descriptions of bioprocesses Selects examples of chemical and stereochemical aspects of enzymatic action with respect to known terrestrial counterparts
