*Manufacturing Planning and Control* P. Higgins, P. Le Roy, L. *Distribution Planning and Control* David F. Ross, 2011-06-27 When work began on the first volume of this text in 1992 the science of distribution management was still very much a backwater of general management and academic thought While most of the body of knowledge associated with calculating EOQs fair shares inventory deployment productivity curves and other operations management techniques had long been solidly established new thinking about distribution management had taken a definite back seat to the then dominant interest in Lean thinking quality management and business process reengineering and their impact on manufacturing and service organizations For the most part discussion relating to the distribution function centered on a fairly recent concept called Logistics Management But despite talk of how logistics could be used to integrate internal and external business functions and even be considered a source of competitive advantage on its own most of the focus remained on how companies could utilize operations management techniques to optimize the traditional day to day shipping and receiving functions in order to achieve cost containment and customer fulfillment objectives In the end distribution management was for the most part still considered a dreary science concerned with transportation rates and cost trade offs expediting and the tedious calculus Today the science of distribution has become perhaps one of the most important and exciting disciplines in the management of business

**Encyclopedia of Production and Manufacturing Management** Paul M. Swamidass, 2006-09-21 The Encyclopedia of Production and Manufacturing Management is an encyclopedia that has been developed to serve this field as the fundamental reference work Over the past twenty years the field of production and operations management has grown more rapidly than ever and consequently its boundaries have been stretched in all directions For example in the last two decades production and manufacturing

management absorbed in rapid succession several new production management concepts manufacturing strategy focused factory just in time manufacturing concurrent engineering total quality management supply chain management flexible manufacturing systems lean production and mass customization to name a few This explosive growth makes the need for this volume abundantly clear The manufacturing industry thinks and acts more broadly than it did several decades ago The most notable change has been the need for manufacturing managers to think in technological strategic and competitive terms This is a very favorable development and it leads to manufacturing success The entries in this encyclopedia include the most recent technical and strategic innovations in production and manufacturing management The encyclopedia consists of articles of varying lengths The longer articles on important concepts and practices range from five to fifteen pages There are about 100 such articles written by nearly 100 authors from around the world In addition there are over 1000 shorter entries on concepts practices and principles The range of topics and depth of coverage is intended to suit both student and professional audiences The shorter entries provide digests of unfamiliar and complicated subjects Difficult subjects are made intelligible to the reader without oversimplification The strategic and technological perspectives on various topics give this Encyclopedia its distinctiveness and uniqueness The world of manufacturing today is increasingly competitive It is apparent that manufacturers must respond to these competitive pressures with technical and strategic innovation This encyclopedia has been developed to help researchers students and those in the manufacturing industry to understand and implement these ongoing changes in the field

research and industrial practice in production management systems      **Distribution** David F. Ross,2012-12-06 It has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events It is not that the facts of history have changed No one will dispute that the battle of Waterloo occurred on June 11 1815 or that the allied invasion of Europe began on June 6 1944 What each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation By examining the facts of history from a new perspective today's historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals Although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today's organizational cultural and economic realities Hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities

Schonberger,2010-05-11 Richard Schonberger in his fourth and most important book yet introduces a powerful new concept

that the many links between and within the four main business functions design operations accounting and marketing form a continuous chain of customers that extends to those who buy the product or service Everyone has a customer the next department office shop or person at the hundreds of pioneering companies Schonberger has studied throughout the world Schonberger demonstrates the universality of customer wants Both the next and final customers want ever better quality quicker response greater flexibility and lower cost This condition provides a common strategy and calls for common methods to be used across the organization Every employee is a data gatherer and analyst unearthing more and better ways to provide for these customers wants before the competition does so As the new thinking and methods permeate every corner of the firm they topple departmental walls and adjust gang like mind sets and them versus us attitudes Performance is no longer measured by internal costs but by improvement as seen by the next customer direct control of causes generally replaces after the fact control of costs Design is brought out of isolation Finally with the rest of the firm reoriented toward customer service marketing escapes from a negative mode covering up for failures to a positive one crowing about the firm's competence and ability to improve With the close attention to detail for which he has become famous Schonberger constructs a blueprint for unifying corporate functions brilliantly describing the new microcosms that will make up the company of the 1990s focused teams of multi skilled involved employees arranged according to the way the work flows or the service is provided that compose the chain of customers Aetna for example is organizing customer focused teams that cut across underwriting and the administrative functions At Hewlett Packard teams of marketing manufacturing and R D people have already gone through several iterations of activity based costing which provides product designers with previously unavailable data for shaving costs throughout product life cycles And at Du Pont even production people on the factory floor are involved in assessing competitors product quality and probable costs and methods Through these and hundreds of other real company examples Schonberger shows how the customer driven chain of action leads directly to the kinds of bottom line performance that have been so elusive to executives who manage at a distance by the numbers namely higher profits greater security and gains in market share at the expense of the laggard competition
