Abstract

Embedded Components in MapleTM 10 enable us to embed simple graphical interface components for example, a button, in our document. These components could then be associated with actions that are to be executed. A text field could also be a part of an input equation. We could embed Button, Toggle Button, Combo Box, Check Box, List Box, Text Area, Label, Slider, Plot and Function. This latest feature has similarity as Maplet which previously introduced in Maple 8. The significant difference between these two Maple components is Maplet could be view with Maplet Viewer without having to launch a Maple session where as for the Embedded Components; it could only be view with a launched Maple session. In this talk, we'll see how the SET OPERATIONS window were build and discuss on its ability to increase the user motivations towards learning this topic.

1. Introduction

Computer Aided System (CAS) has been used for computations for decades. Now it is common to include CAS as part of the teaching and learning process in classrooms. Further it also acts as a medium of instruction and supplements in the class. With CAS we now can escape tedious numerical calculations and let students to concentrate more on concepts and techniques involved in the solution of problems.

Today there are several CAS available in the market such as Mathematica, Matlab, Mathcad, Maple a few examples of CAS that are usually used as tools in teaching and learning mathematics. For this research, we consider to work with Maple since Maple has what it takes to help us achieves our objectives and goals. The usage of Maple was shown in the effectiveness in order to demonstrate most of the hard topics with the use of simple Maple program (see [1]). There are no restrictions in identifying the most suitable CAS with the needs. Maple is chosen as its availability in the environment. Thus Maple's vast functionality provides vibrant atmosphere for mathematical computation as well as graphical visualization and also possible to produce interactive technical documents.

Maple User Manual, 2007 *Differential Geometry of Curves and Surfaces* Thomas F. Banchoff, Stephen Lovett, 2022-08-05 Through two previous editions the third edition of this popular and intriguing text takes both an analytical theoretical approach and a visual intuitive approach to the local and global properties of curves and surfaces Requiring only multivariable calculus and linear algebra it develops students geometric intuition through interactive graphics applets Applets are presented in Maple workbook format which readers can access using the free Maple Player The book explains the reasons for various definitions while the interactive applets offer motivation for definitions allowing students to explore examples further and give a visual explanation of complicated theorems The ability to change parametric curves and parametrized surfaces in an applet lets students probe the concepts far beyond what static text permits Investigative project ideas promote student research At users of the previous editions request this third edition offers a broader list of exercises More elementary exercises are added and some challenging problems are moved later in exercise sets to assure more graduated progress The authors also add hints to motivate students grappling with the more difficult exercises This student friendly and readable approach offers additional examples well placed to assist student comprehension In the presentation of the Gauss Bonnet Theorem the authors provide more intuition and stepping stones to help students grasp phenomena behind it Also the concept of a homeomorphism is new to students even though it is a key theoretical component of the definition of a regular surface Providing more examples show students how to prove certain functions are homeomorphisms *Kitchen Gear: The Ultimate Owner's Manual* America's Test Kitchen, 2023-11-07 Leading kitchen gear experts Lisa McManus and Hannah Crowley share what they really think about Dutch ovens air fryers grills and more in this indispensable handbook for gear heads everywhere The perfect gift for fledgling cooks newlyweds cooking nerds and new homeowners Ever wondered why your knives dull so quickly Whether it's safe to stand next to a running microwave If compostable dinnerware is really better for the environment With its combination of straight talking science backed advice from professional equipment reviewers Lisa McManus and Hannah Crowley practical how to guides engrossing trivia and beautiful full color photography Kitchen Gear is an indispensable source of collected wisdom you won't find anywhere else Hannah and Lisa's unfiltered takes on which pieces are and aren't worth it Spring for the high end blender rethink that knife block And did you know you can make pour over coffee with a dollar store funnel Improve your cooking with 100 recipes that teach you what your gear is capable of Use your sheet pan to make the easiest ever layer cake Make crispy fried garnishes in your microwave Plus use common tools in creative ways fully loaded nachos on the grill anyone Answers to all the hows whys and wait what's of your equipment The question and answer format covers everything from frequently asked questions to real head scratchers Keep your tools in top condition Season your pans the right way de stinkify silicone ice trays and finally get that gunk off your toaster oven Peek behind the scenes Read all about the zany lengths Lisa Hannah and their team will go to for answers from
