Feedback from some visitors to this site requested advice regarding the logical sequence and/or thematic focus of the articles and papers. Some also asked for copies of publications not yet uploaded.

- Once the paper is published by the publisher and I am allowed to post a copy (which is mostly possible due to the conferences and journals I pick), I upload a copy to ResearchGate. If I am disallowed to post a copy, I just post an extended abstract (including keywords, subtitles, and references) together with the publisher's URL for accessing the publication.
- However, I do add contributions after the paper has been presented at a conference although the submission deadline set by the publisher for a publication is some months later. Sometimes, I also add an entry when a submission is still under review, because I like to utilize a ResearchGate URL-address for citing the in-the-pipeline-publications in my follow-up papers. Once the final version of such publication is published, the previous paragraph applies.

The Personal Knowledge Management (PKM) concept and prototype system introduced in the publications are based on autonomous capacities engaged in what Levy describes as creative conversations in order to enable the emergence of the distributed processes of collective extelligence and intelligence, which in turn feed them.

Their primary aim is advancing lifelong Personal Knowledge Management support and academic and professional growth benefitting individuals as contributors and beneficiaries of institutional and societal performance. As such it opens up opportunities to de-centrally tackle KM by employing grass roots, bottom-up, lightweight, affordable applications. Although this means departing from the centralized institutional top-down developments and strengthening individual sovereignty and personal capacities, it is not meant to be at the expense of Organizational KM Systems, but rather as the means to foster a fruitful co-evolution.

During the 90s, the author started to develop this PKM concept and with it the prototype system which has been continuously expanded and used personally for career support as a management consultant, scholar, professor, and academic manager. Recent advances in development, database, and hosting platforms have now provided a viable opportunity for innovation and its conversion into an application serving a wider audience across technological environments.

In parallel to further advancing the PKM prototype system, paper and poster presentations have focused on various aspects of the concept and design. In acknowledging the trans-disciplinarity of the PKM notion, the peer-reviewed papers received feedback from and addressed a wide scope of conference themes, including Knowledge Management and Knowledge Technologies, Management and Social Sciences, Higher Education and Educational Technologies, Human Resource Development, Innovation and Creativity Support Systems, Organizational Learning and e-Learning, as well as Informing Science, Sustainability, and Future Studies.

Table 1 provides short abstracts of the papers and articles published, accepted, or currently under review presented in six thematic clusters. I trust it will provide some navigational guidance.

ICICKM2015-12th International Conference on Intellectual Capital Knowledge Management & Organisational Learning
Vincent Ribi re and Lugkana Worasinchai, 2015-10-20 Special Issue: Knowledge Management - Current Trends and

Challenges Ma gorzata Zi ba, 2017-01-01 Knowledge management KM has become an evolving discipline since the early 1990s when organizations started perceiving knowledge as a valuable resource This field of research has its origin in many disciplines such as information and IT management computer science enterprise management organization science human resource management and even philosophy offering many potential research perspectives and approaches For more than three decades organizations of various types have been undertaking efforts to apply knowledge management in order to benefit from a competitive advantage Researchers and practitioners from diversified industries and with different backgrounds have tried to answer the question how to successfully manage knowledge knowledge work and knowledge workers still leaving much space for further research avenues Now after all those years of research some old questions have still not been answered and some new ones have arisen During the pre conference workshop on The future of KM short time goals and long term vision organized in Barcelona before the European Conference on Knowledge Management 2017 and conducted by myself and my colleague Dr Sandra Moffett from Ulster University UK we asked the participants what their idea of the future of KM was We could observe many different voices and approaches some very pessimistic that KM is probably coming to an end but mostly very promising that there are still many unexplored aspects of KM we should focus on and there is still a plethora of issues related to knowledge management that should be examined Similar voices can be detected in the flagship article written by Meliha Handzic who claims that KM definitely has a future although it may not be without some challenges and obstacles to overcome This paper links the past three evolutionary stages of KM called fragmentation integration and fusion with the future of KM three new trends named extension specialization and reconceptualization The author also suggests that KM should embrace different approaches under the KM Conceptual Umbrella highlighting the possibility of addressing many themes ideas or tools linked with knowledge All the past and future evolutionary stages of KM are described in detail together with the challenges that the KM field might face in the future In the second paper by Philip Sisson and Julie J C H Ryan the authors present a mental model of knowledge as a concept map being an input to KM research The authors used qualitative methods together with system engineering and object analysis methods to collect various concepts and relate them The issue of knowledge is elementary in knowledge management and showing the links between particular knowledge terms is of very high value to all KM researchers Although the length of this

article may constitute a challenge it is definitely worth the effort as it illustrates many multifaceted multilayered and multidimensional aspects of knowledge The third paper by Karl Joachim Breunig and Hanno Roberts discusses another valid issue of value creation in the context of knowledge flow The authors try to answer the question How can we express knowledge in such a way that it can be monetized and made accessible to specific managerial interventions Building on the previous extant studies and authors ideas the paper points out that boundary spanners play a focal role in the monetization efforts of knowledge In the fourth paper by Regina Lenart Gansiniec one can read about crowdsourcing and the virtual knowledge sharing taking place in this process The phenomenon of crowdsourcing is still under researched and not much is known about the virtual exchange of knowledge in crowdsourcing and its benefits such as co creation participation or gaining new ideas and potential sources of innovations Apart from the examination of the potential benefits of virtual knowledge sharing the author also analyses ways of measuring virtual knowledge sharing in the process of crowdsourcing The fifth paper by Kaja Prystupa concerns knowledge management processes in small entities and the role played by organizational culture As the aim of this paper the author set the examination of organizational culture in small Polish companies with the application of a symbiotic interpretive perspective Interesting outcomes of this study are the confirmed role of organizational culture in KM initiatives the importance of the founder and the industry and the threat posed by organizational growth which should be well managed from the perspective of organizational culture so as not to hinder organizational performance The sixth and the final paper by David Mendes Jorge Gomes and M rio Rom o deals with ways of creating intangible value through the use of a corporate employee portal The authors undertake the effort to explain how such a portal fosters the creation of organizational values built on intangible assets As the research confirms an employee portal can be considered as a strategic tool for promoting organizational culture and cooperation through information and communication fluxes and through the teamwork of collaborative functionalities This issue of JEMI integrates contributions from Bosnia and Herzegovina the United States Norway Poland and Portugal I would like to express my gratitude to all the authors who contributed to this special issue proving that knowledge management is still a valid topic and offering abundant research opportunities I would also like to express my sincerest thanks to the anonymous reviewers who contributed highly to the selection of the best submissions for this issue and guided the authors to further improvements in their works Finally I would like to pay special thanks to Dr Anna Ujwary Gil Editor in Chief of JEMI for her kind invitation to prepare this special issue and her continual support at each stage of its preparation I do hope that the readers of JEMI find the selected papers valuable and that they enrich their knowledge on KM issues Additionally I do believe that the collected works will be inspiring and offer some future directions for the examination of the knowledge management field Dr Ma gorzata Zi ba Guest Editor JEMI Assistant Professor Gdansk University of Technology Poland

Byrne, 2019-01-29 Invertebrates have proven to be extremely useful model systems for gaining insights into the neural and molecular mechanisms of sensory processing motor control and higher functions such as feeding behavior learning and memory navigation and social behavior A major factor in their enormous contributions to neuroscience is the relative simplicity of invertebrate nervous systems In addition some invertebrates primarily the molluscs have large cells which allow analyses to take place at the level of individually identified neurons Individual neurons can be surgically removed and assayed for expression of membrane channels levels of second messengers protein phosphorylation and RNA and protein synthesis Moreover peptides and nucleotides can be injected into individual neurons Other invertebrate model systems such as *Drosophila* and *Caenorhabditis elegans* offer tremendous advantages for obtaining insights into the neuronal bases of behavior through the application of genetic approaches The Oxford Handbook of Invertebrate Neurobiology reviews the many neurobiological principles that have emerged from invertebrate analyses such as motor pattern generation mechanisms

of synaptic transmission and learning and memory It also covers general features of the neurobiology of invertebrate circadian rhythms development and regeneration and reproduction Some neurobiological phenomena are species specific and diverse especially in the domain of the neuronal control of locomotion and camouflage Thus separate chapters are provided on the control of swimming in annelids crustacea and molluscs locomotion in hexapods and camouflage in cephalopods Unique features of the handbook include chapters that review social behavior and intentionality in invertebrates A chapter is devoted to summarizing past contributions of invertebrates to the understanding of nervous systems and identifying areas for future studies that will continue to advance that understanding
