Modern Architecture and Climate Daniel A. Barber, 2023-04-11 How climate influenced the design strategies of modernist architects Modern Architecture and Climate explores how leading architects of the twentieth century incorporated climate mediating strategies into their designs and shows how regional approaches to climate adaptability were essential to the development of modern architecture Focusing on the period surrounding World War II before fossil fuel powered air conditioning became widely available Daniel Barber brings to light a vibrant and dynamic architectural discussion involving design materials and shading systems as means of interior climate control He looks at projects by well known architects such as Richard Neutra Le Corbusier L cio Costa Mies van der Rohe and Skidmore Owings and Merrill and the work of climate focused architects such as MMM Roberto Olgyay and Olgyay and Cliff May Drawing on the editorial projects of James Marston Fitch Elizabeth Gordon and others he demonstrates how images and diagrams produced by architects helped conceptualize climate knowledge alongside the work of meteorologists physicists engineers and social scientists Barber describes how this novel type of environmental media catalyzed new ways of thinking about climate and architectural design Extensively illustrated with archival material Modern Architecture and Climate provides global perspectives on modern architecture and its evolving relationship with a changing climate showcasing designs from Latin America Europe the United States the Middle East and Africa This timely and important book reconciles the cultural dynamism of architecture with the material realities of ever increasing carbon emissions from the mechanical cooling

Architectural History Lester Wertheimer, 2004 This course by Lester Wertheimer FAIA deals with the ideas and examples which have established the architectural tradition of the Western world Although there is no written test specifically on this subject architectural history questions are included in many sections of the exam The seven lessons review the theories influences characteristics and major monuments from ancient times through the 20th century including Ancient architecture Greek and Roman architecture Medieval architecture Renaissance architecture Roots of modern architecture American architecture 20th century architecture Checklist of significant 20th century structures The course is attractively illustrated with numerous sketches plans and diagrams and enhanced by a glossary bibliography and an extensive index A short review quiz follows each lesson and the course concludes with a major examination Complete explanations of all quiz and examination answers are included *The Urban Microclimate as Artifact* Sascha Roesler, Madlen Kobi, 2018-09-24

Urban microclimates cannot be explained solely on the basis of scientific phenomena but are also affected materially and spatially by the city's local architecture The layout design and facade construction of buildings have a major impact on wind and temperature conditions For this reason architecture and urban design that have an effect on microclimates must be investigated in their social and cultural contexts The publication uses international case studies to explain these relationships The focus is on manifestations of urban microclimates in an architectural and urban design context The places investigated are located in France Italy the USA New Zealand the Philippines Taiwan and Burkina Faso **Re-creating the American Past** Richard Guy Wilson, Shaun Eyring, Kenny Marotta, 2006 Although individually and collectively Americans have many histories the dominant view of our national past focuses on the colonial era The reasons for this are many and complex touching on stories of the country's origins and of the founding fathers the privileged position in history granted the thirteen original colonies and the ways in which the nation has adjusted to change and modernity But no matter the cause the result is obvious images and forms derived from and related to America's colonial past are the single most popular form of cultural expression Often conceived solely in architectural terms from the red brick and white trimmed buildings that recall eighteenth century James River estates to the clapboarded saltboxes that recall early New England Colonial Revival is in fact better understood as a process of remembering In Re-creating the American Past architectural historian Richard Guy Wilson and a host of other scholars examine how and why Colonial Revival has persisted in modern times The volume contains essays that explore Colonial Revival expressions in architecture landscape architecture historic preservation decorative arts and painting and sculpture as well as the social intellectual and cultural background of the phenomena Based on the University of Virginia's landmark 2000 conference The Colonial Revival in America Re-creating the American Past is a comprehensive and handsome volume that recovers the origins characteristics diversity and significance of the Colonial Revival situating it within the broader history of American design culture and society

Architecture/Art/Parallels/Connections Barry A. Berkus, 2000 Looks at the parallels between works of art that are often separated by long periods of time or spatial context American Art and Architecture Michael J Lewis, 2006-06-06 Provides an introduction to the history of American art and architecture from its 17th century colonial beginnings to the installation and video work Structured chronologically this book not only discusses the key artists and architects art works and buildings but also defines the characteristics of the different periods
