

How to Pass the January, 2019 Living Environment Regents

Way #	Topic	Concept	Explanation
3	Scientific Method	<u>Control Group vs. Experimental Group</u>	The control group gets left alone; the experimental group is where you make changes so you can compare them to make a valid conclusion

To study how bacteria respond to antibiotics, four paper discs, three treated with different antibiotics and one treated with water, were placed on a nutrient source with bacteria and left for 24 hours. The water and the antibiotics on the discs diffused into the nutrient source. If the antibiotic stopped the bacteria from growing, a circular area of no bacterial growth around the discs could be seen.

- 35 In this experiment, the purpose of using a disc treated with water is that it
- (1) serves as the conclusion for the experiment
 - (2) is needed to provide additional moisture
 - (3) serves as a control for the experiment
 - (4) is needed as a standard safety procedure
