Criminal Trials and Mental Disorders Thomas L. Hafemeister, 2019-02-05 The complicated relationship between defendants with mental health disorders and the criminal justice system The American criminal justice system is based on the bedrock principles of fairness and justice for all In striving to ensure that all criminal defendants are treated equally under the law it endeavors to handle similar cases in similar fashion attempting to apply rules and procedures even handedly regardless of a defendant's social class race ethnicity or gender Yet the criminal justice system has also recognized exceptions when special circumstances underlie a defendant's behavior or are likely to skew the defendant's trial One of the most controversial set of exceptions often poorly articulated and inconsistently applied involves criminal defendants with a mental disorder A series of special rules and procedures has evolved over the centuries often without fanfare and even today with little systematic examination that lawyers and judges apply to cases involving defendants with a mental disorder This book provides an analysis of the key issues in this dynamic interplay between individuals with a mental disorder and the criminal justice system The volume identifies the various stages of criminal justice proceedings when the mental status of a defendant may be relevant associated legal and policy issues the history and evolution of these issues and how they are currently resolved To assist this exploration the text also offers an overview of mental disorders their relevance to criminal proceedings how forensic mental health assessments are conducted and employed during these proceedings and their application to competency and responsibility determinations In sum this book provides an important resource for students and scholars with an interest in mental health law and criminal justice

The Varieties of Suicidal Experience Thomas Joiner, 2024-02-13 Seemingly disparate phenomena murder suicide suicide by cop suicide terrorism amok most spree killings death row volunteering and even physician assisted suicide share a commonality All are at bottom suicidal in their origin and motive

Violence and Mental Illness Eric B. Elbogen, Nico Verykoulis, 2023-08-08 When newsworthy violence occurs mental illness is frequently blamed This overemphasis on mental illness fuels social stigma and cognitive bias that exaggerates the link between violence and mental illness But science shows this link is weaker than commonly believed and that numerous other risk factors are stronger predictors of violence such as psychopathy younger age being male access to guns substance abuse and anger Because overemphasizing the role of mental illness leads to underemphasizing the role of these other risk factors this leads to suboptimal violence prevention policy Conversely if the media policymakers and the public recognize these stronger multiple risk factors for violence then this opens up the door to developing and implementing more effective strategies for evidence based violence prevention that will lead to greater public safety

Understanding Police Interrogation William Douglas Woody, Krista D. Forrest, 2020-03-03 Uses techniques from psychological science and legal theory to explore police interrogation in the United States Understanding Police Interrogation provides a single comprehensive source for understanding issues relating to police interrogation and confession It sheds light on the range of factors that may influence the outcome of the interrogation of a suspect which ones make it more likely that a person will confess and which may also inadvertently lead to false confessions There is a significant psychological component to police interrogations as interrogators may try to build rapport with the suspect or trick them into thinking there is evidence against them that does not exist Also important is the extent to which the interrogator is convinced of the suspect's guilt a factor that has clear ramifications for today's debates over treatment of black suspects and other people of color in the criminal justice system The volume employs a totality of the circumstances approach arguing that a number of integrated factors such as the characteristics of the suspect the characteristics of the interrogators interrogation techniques and location community perceptions of law enforcement and expectations for jurors and judges all contribute to the nature of interrogations and the outcomes and perceptions of the criminal justice system The authors argue that by drawing on this approach we can better explain the likelihood of interrogation outcomes including true and false confessions and provide both scholars and practitioners with a greater understanding of best practices going forward

The Psychological Foundations of Evidence Law Michael J Saks, Barbara A Spellman, 2016-01-22 Identifies and evaluates the psychological choices implicit in the rules of evidence Evidence law is meant to facilitate trials that are fair accurate and efficient and that encourage and protect important societal values and relationships In pursuit of these often conflicting goals common law judges and modern drafting committees have had to perform as amateur applied psychologists Their task has required them to employ what they think they know about the ability and motivations of witnesses to perceive store and retrieve information about the effects of the litigation process on testimony and other evidence and about our

capacity to comprehend and evaluate evidence These are the same phenomena that cognitive and social psychologists systematically study The rules of evidence have evolved to restrain lawyers from using the most robust weapons of influence and to direct judges to exclude certain categories of information limit it or instruct juries on how to think about it Evidence law regulates the form of questions lawyers may ask filters expert testimony requires witnesses to take oaths and aims to give lawyers and factfinders the tools they need to assess witnesses reliability But without a thorough grounding in psychology is the common sense of the rulemakers as they create these rules always or even usually correct And when it is not how can the rules be fixed Addressed to those in both law and psychology The Psychological Foundations of Evidence Law draws on the best current psychological research based knowledge to identify and evaluate the choices implicit in the rules of evidence and to suggest alternatives that psychology reveals as better for accomplishing the law s goals

Closing the Justice Gap for Adult and Child Sexual Assault Anne Cossins, 2020-10-21 This book examines the justice gap and trial process for sexual assault against both adults and children in two jurisdictions England and Wales and New South Wales Australia Drawing on decades of research it investigates the reality of the policing and prosecution of sexual assault offences often seen as one of the hardest crimes to prosecute across two similar jurisdictions Despite the introduction of the many reform options detailed in the book satisfactory outcomes for victims and the public are still difficult to obtain Cossins takes a new approach by examining the nature and effects of adversarialism on vulnerable witnesses jury decision making and the structures of power within the trial process to show how and at what points that process is weighted against complainants of sexual assault in order to make evidence based suggestions for reform She argues that this justice gap is a result of a moralisticadversarial culture which fosters myths and misconceptions about rape and child sexual assault thus requiring the prosecution to prove a complainant s moral worthiness She argues this culture can only be eliminated by a radical replacement of the adversarial system with a trauma informed system By reviewing the relevant psychological literature this book documents the triggers for re traumatisation within an adversarial trial and discusses the reform measures that would be necessary to transform the sexual assault trial from one where the complainant s moral worthiness is on trial to a fully functioning trauma informed system It speaks to students and academics across subjects including law criminology gender studies and psychology and practitioners in law and victim services as well as policy makers
