Albrecht,B. Buchberger,G.E. Collins,R. Loos,2013-06-29 The journal Computing has established a series of supplement volumes the fourth of which appears this year Its purpose is to provide a coherent presentation of a new topic in a single volume The previous subjects were Computer Arithmetic 1977 Fundamentals of Numerical Computation 1980 and Parallel Processes and Related Automata 1981 the topic of this 1982 Supplementum to Computing is Computer Algebra This subject which emerged in the early nineteen sixties has also been referred to as symbolic and algebraic computation or formula manipulation Algebraic algorithms have been receiving increasing interest as a result of the recognition of the central role of algorithms in computer science They can be easily specified in a formal and rigorous way and provide solutions to problems known and studied for a long time Whereas traditional algebra is concerned with constructive methods computer algebra is furthermore interested in efficiency in implementation and in hardware and software aspects of the algorithms It develops that in deciding effectiveness and determining efficiency of algebraic methods many other tools recursion theory logic analysis and combinatorics for example are necessary In the beginning of the use of computers for symbolic algebra it soon became apparent that the straightforward textbook methods were often very inefficient Instead of turning to numerical

approximation methods computer algebra studies systematically the sources of the inefficiency and searches for alternative algebraic methods to improve or even replace the algorithms      **Government Reports Annual Index** ,1991

**Whitaker's Books in Print** ,1998      **The Non-Linear Field Theories of Mechanics** C. Truesdell,Walter Noll,2013-04-17 This volume is a second corrected edition of The Non Linear Field Theories of Mechanics which first appeared as Volume IIII3 of the Encyclopaedia of Physics 1965 Its principal aims were to replace the conceptual terminological and notational chaos that existed in the literature of the field by at least a modicum of order and coherence and second to describe or at least to summarize everything that was both known and worth knowing in the field at the time Inspecting the literature that has appeared since then we conclude that the first aim was achieved to some degree Many of the concepts terms and notations we introduced have become more or less standard and thus communication among researchers in the field has been eased On the other hand some ill chosen terms are still current Examples are the use of configuration and deformation for what we should have called and now call placement and transplacement respectively To classify translations and rotations as deformations clashes too severely with the dictionary meaning of the latter We believe that the second aim was largely achieved also We have found little published before 1965 that should have been included in the treatise but was not However a large amount of relevant literature has appeared since 1965 some of it important As a result were the treatise to be written today it should be very different      *British Books in Print* ,1979
