Teaching Secondary Mathematics David Rock,Douglas K. Brumbaugh,2013-02-15 Solidly grounded in up to date research theory and technology

Teaching Secondary Mathematics is a practical student friendly and popular text for secondary mathematics methods courses. It provides clear and useful approaches for mathematics teachers and shows how concepts typically found in a secondary mathematics curriculum can be taught in a positive and encouraging way. The thoroughly revised fourth edition combines this pragmatic approach with truly innovative and integrated technology content throughout. Synthesized content between the book and comprehensive companion website offers expanded discussion of chapter topics, additional examples and technological tips. Each chapter features tried and tested pedagogical techniques, problem solving challenges, discussion points, activities, mathematical challenges and student life based applications that will encourage students to think and do. New to the 4th edition: A fully revised and updated chapter on technological advancements in the teaching of mathematics. Connections to both the updated NCTM Focal Points as well as the new Common Core State Standards are well integrated throughout the text. Problem solving challenges and sticky questions featured in each chapter to encourage students to think through everyday issues and possible solutions. A fresh interior design to better highlight pedagogical elements and key features. A companion website with chapter by chapter video lessons, teacher tools, problem solving Q As, helpful links and resources and embedded graphing calculators.

Rods, Sets and Arrows Dirk De Bock, Geert Vanpaemel, 2019-12-10. For anyone interested in the history and effects of the introduction of so called Modern Mathematics or Math matique Moderne or New Mathematics etc, this book by Dirk De Bock and Geert Vanpaemel is essential reading. The two authors are experienced and highly qualified Belgian scholars and the book looks carefully at events relating to school mathematics for the period from the end of World War II to 2010. Initially the book focuses on events which helped to define the modern mathematics revolution in Belgium before and during the 1960s. The book does much more than that, however, for it traces the influence of these events on national and international debates during the early phases of the reform. By providing readers with translations into English of relevant sections of key Continental documents outlining the major ideas of leading Continental scholars who contributed to the Math matique Moderne movement, this book makes available to a wide readership the theoretical, social and political backdrops of Continental new mathematics reforms. In particular, the book focuses on the contributions made by Belgians such as Paul Libois, Willy Servais, Ferdinand Lenger and Georges Papy. The influence of modern mathematics fell away rapidly in the 1970s, however, and the authors trace the rise and fall from that time into the 21st century of a number of other approaches to school mathematics in Belgium, in other Western European nations and in North America. In summary, this is an outstanding landmark publication displaying the fruits of deep scholarship and careful research based on extensive analyses of primary sources.
