Cybersecurity Leadership for Healthcare Organizations and

Institutions of Higher Education Bradley Fowler, Bruce G. Chaundy, 2025-02-28 Healthcare organizations and institutions of higher education have become prime targets of increased cyberattacks. This book explores current cybersecurity trends and effective software applications, AI and decision making processes to combat cyberattacks. It emphasizes the importance of compliance, provides downloadable digital forensics software and examines the psychology of organizational practice for effective cybersecurity leadership. Since the year 2000, research consistently reports devastating results of ransomware and malware attacks impacting healthcare and higher education. These attacks are crippling the ability for these organizations to effectively protect their information systems, information technology and cloud based environments. Despite the global dissemination of knowledge, healthcare and higher education organizations continue wrestling to define strategies and methods to secure their information assets, understand methods of assessing qualified practitioners to fill the alarming number of open positions to help improve how cybersecurity leadership is deployed as well as improve workplace usage of technology tools without exposing these organizations to more severe and catastrophic cyber incidents. This practical book supports the reader with downloadable digital forensics software, teaches how to utilize this software as well as correctly securing this software as a key method to improve usage and deployment of these software applications for effective cybersecurity leadership. Furthermore, readers will understand the psychology of industrial organizational practice as it correlates with cybersecurity leadership. This is required to improve management of workplace conflict which often impedes personnel's ability to comply with cybersecurity law and policy domestically and internationally.
