Vita-Finzi, 2016-07-14 This well illustrated book presents a compact history of the Solar System from its dusty origins 4 600 000 years ago to the present day Its primary aim is to show how the planets and their satellites comets meteors interplanetary dust solar radiation and cosmic rays continually interact sometimes violently and it reflects humanity's progress in exploring and interpreting this history The book is intended for a general readership at a time when human and

robotic exploration of space is often in the news and should also appeal to students at all levels It covers the essentials but refers to a large literature which can be accessed via the internet

Our Solar System, 1993 **Journey Through the Solar System** John Bluck, 1987 The Secret Lives of Planets Paul Murdin, 2019-07-11 A deft frequently dramatic tour Nature A wonderfully clear and readable book Gives a splendid overview of our Sun s planetary system including its history and exploration Dame Jocelyn Bell Burnell We have the impression that the solar system is perfectly regular like a clock or a planetarium instrument On a short timescale it is But seen in a longer perspective the planets and their satellites have exciting lives full of events for example did you know that Saturn s moon Titan boasts lakes which contain liquid methane surrounded by soaring hills and valleys exactly as the earth did before life evolved on our fragile planet Or that Mercury is the shyest planet Or that Mars biggest volcano is 100 times the size of Earth s or that its biggest canyon is 10 times the depth of the Grand Canyon or that it wasn t always red but blue The culmination of a lifetime of astronomy and wonder Paul Murdin s enchanting new book reveals everything you ever wanted to know about the planets their satellites and our place in the solar system The Story of the Solar System George Frederick Chambers, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1904 edition Excerpt periods of Mercury and Venus on the one hand and of Uranus and Neptune on the other are attended with so much difficulty that the recorded results are of doubtful trustworthiness It is however reasonable to presume that the actual size of the respective planets has more to do with the matter than their distances from the Sun I think that the foregoing summary respecting the planets collectively embraces as many points as are likely to be of interest to the generality of readers we will therefore pass on to consider somewhat in detail the several constituent members of the solar system beginning with the Sun

CHAPTER II THE SUN There was once a book published the title of which was *The Sun Ruler Fire Light and Life of the Planetary System* The title was by no means a bad one for without doubt the Sun may fairly be said to represent practically all the ideas conveyed by the designations quoted There is certainly no one body in creation which is so emphatically pre eminent as the Sun Whether or no there are stars which are suns centres of systems serving in their degree the purposes served by our Sun I need not now pause to enquire though I think the idea is a very probable one but of those celestial objects with which our Earth has a direct relationship beyond doubt the Sun is unquestionably entitled to the foremost place It is as it were the pivot on which the Earth and all the various bodies comprising the Solar System revolve in their annual progress It is our source of light and heat and therefore may be called the great agent by which an Almighty Providence wills to sustain animal and vegetable life The consideration of all the complicated questions which arise out of these functions of the Sun belongs
