**The Psychology of Magic and the Magic of Psychology** Amir Raz, Jay A. Olson, Gustav Kuhn, 2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic

effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception

Martínez, 2022-06-07 How magicians exploit the natural functioning of our brains to astonish and amaze us How do magicians make us see the impossible The Illusionist Brain takes you on an unforgettable journey through the inner workings of the human mind revealing how magicians achieve their spectacular and seemingly impossible effects by interfering with your cognitive processes Along the way this lively and informative book provides a guided tour of modern neuroscience using magic as a lens for understanding the unconscious and automatic functioning of our brains We construct reality from the information stored in our memories and received through our senses and our brains are remarkably adept at tricking us into believing that our experience is continuous In fact our minds create our perception of reality by elaborating meanings and continuities from incomplete information and while this strategy carries clear benefits for survival it comes with blind spots that magicians know how to exploit Jordi Camí and Luis Martínez explore the many different ways illusionists manipulate our attention making us look but not see and take advantage of our individual predispositions and fragile memories The Illusionist Brain draws on the latest findings in neuroscience to explain how magic deceives us surprises us and amazes us and demonstrates how illusionists skillfully hack our brains to alter how we perceive things and influence what we imagine
