Maintenance Planning Coordination And Scheduling:

Maintenance Planning, Scheduling, and Coordination Don Nyman, Joel Levitt, 2001 Well planned properly scheduled and effectively communicated jobs accomplish more work more efficiently and at a lower cost This work will disturb operations less frequently and be accomplished with higher quality greater job satisfaction and higher organizational morale than jobs performed without proper preparation Maintenance Planning Scheduling Coordination focuses on and deals specifically with the preparatory tasks that lead to effective utilization and application of maintenance resources It is a vital training document for planners an educational document for those to whom planners are responsible and a valuable guide for those who interface with the planning and scheduling function and are dependent upon the many contributions of planning and scheduling operational excellence

Maintenance Planning, Coordination and Scheduling Don Nyman, Joel Levitt, 2010 This book thus deals specifically with preparatory tasks that lead to effective utilization and application of maintenance resources in order to achieve the level of reliability essential to an organization's business objectives It comprehensively examines the job preparation process from job scoping and planning to determination of material requirements estimation of labor requirements and job duration coordination of all involved parties and job scheduling Related metrics are included

Maintenance Planning and Scheduling Timothy C. Kister, Bruce Hawkins, 2006-05-10 This is a hands on reference guide for the maintenance or reliability engineer and plant manager As the third volume in the Life Cycle Engineering series this book takes the guiding principles of Lean Manufacturing and Maintenance and applies these concepts to everyday planning and scheduling tasks allowing engineers to keep their equipment running smoothly while decreasing downtime The authors offer invaluable advice on the effective use of work orders and schedules and how they fit into the overall maintenance plan There are not many books out there on planning and scheduling that go beyond the theory and show the engineer in a hands on way how to use planning and scheduling techniques to improve performance cut costs and extend the life of their plant machinery The only book that takes a direct look at streamlining planning and scheduling for a Lean Manufacturing Environment This book shows the engineer how to create and stick to effective schedules Gives examples and templates in the back of the book for use in day to day scheduling and calculations

Reliable Maintenance Planning, Estimating, and Scheduling Ralph Peters, 2014-11-19 Written specifically for the oil and gas industry Reliable Maintenance Planning Estimating and Scheduling provides maintenance managers and engineers with the tools and techniques to create a manageable maintenance program that will save money and prevent costly facility shutdowns The ABCs of work identification planning prioritization scheduling and execution are explained The objective is to provide the capacity to identify select and apply maintenance interventions that assure an effective maintenance management while maximizing equipment performance value creation and opportune and effective decision making The book provides a pre and post self assessment that will allow for measure competency improvement Maintenance Managers and Engineers receive an expert

Concurrent planning of railway maintenance windows and train services Tomas Lidén, 2018-11-05 Efficiency in public and freight transportation systems is of great importance for a society Railways can offer high capacity and relatively low environmental impact but require that several technical systems are tuned and operate well Specifically there is a tight interdependency between infrastructure and trains The consequences are that all subsystems must be maintained and that the coordination of infrastructure activities and train operations is essential Railway infrastructure maintenance and train services should ideally be planned together but practice and research about railway scheduling has historically focused mainly on train operations and timetabling while maintenance planning has received less attention and little research have considered the joint scheduling of both types of activities Instead the traditional approach has been a sequential and iterative planning procedure where train timetabling often has precedence over infrastructure maintenance This thesis studies how maintenance windows which are regular time windows reserved for maintenance work can be dimensioned and jointly scheduled with train services in a balanced and efficient way for both maintenance contractors and train operators Mathematical methods are used with the aim of advancing the knowledge about quantitative methods for solving such coordination problems The thesis contributes with new optimization models that jointly schedule maintenance windows and train services investigates the solving efficiency of these models and studies crucial extensions of the planning problem primarily for the consideration of maintenance resources Furthermore the models are applied to verified and validated on a demanding real life problem instance The main results are that integrated and optimal scheduling of maintenance windows and train services is viable for problems of practical size and importance and that substantial maintenance cost savings can be achieved with such an integrated approach as compared to a traditional sequential planning process The thesis consists of an introduction and overview of the research followed by six papers which present

- 1 A cost benefit model for assessment of competing capacity requests at a single location
- 2 An optimization model for

integrated scheduling of both maintenance windows and train services 3 Mathematical reformulations that strengthen the optimization model 4 Extensions for handling resource considerations and cyclic schedules 5 A case study for a major single track line in Sweden and 6 A mathematical study of length restricted sequences under cyclic conditions
