Long Acting Injections and Implants Jeremy C. Wright,Diane J. Burgess,2012-01-29 Long acting injections and implants improve therapy enhance patient compliance improve dosing convenience and are the most appropriate formulation choice for drugs that undergo extensive first pass metabolism or that exhibit poor oral bioavailability An intriguing variety of technologies have been developed to provide long acting injections and implants Many considerations need to go into the design of these systems in order to translate a concept from the lab bench to actual therapy for a patient This book surveys and summarizes the field Topics covered in Long Acting Injections and Implants include the historical development of the field drugs diseases and clinical applications for long acting injections and implants anatomy and physiology for these systems specific injectable technologies including lipophilic solutions aqueous suspensions microspheres liposomes in situ forming depots and self assembling lipid formulations specific implantable technologies including osmotic implants drug eluting stents and microfabricated systems peptide protein and vaccine delivery sterilization drug release testing and regulatory aspects of long acting injections and implants This volume provides essential information for experienced development professionals but was also written to be useful for scientists just beginning work in the field and for others who need an understanding of long acting injections and implants This book will also be ideal as a graduate textbook

Biodegradable Long Acting Injectables and Implants Farshad Ramazani,2025-03-29 Long acting injectables and implants LAI are known to improve patient adherence and treatment outcomes They reduce costs for the healthcare system and ensure sustainable sales for pharmaceutical companies LAI are usually administered intramuscularly IM or subcutaneously SC In this way the drug is released from its depot in a controlled manner over a longer period of time e g a few days to a year There is a trend toward increasing interest in the development of long acting drugs for local administration versus systemic administration of depot products i e IM or SC injection This is leading to finding new ways of administration of the depot formulation intra ocular intra articular pri tendon etc Therefore it is expected that more drugs based on LAI formulations will enter the clinical phase in the future Due to many benefits in adherence efficacy and safety of the treatment up until now around 50 brand name medicines using different biodegradable long acting technology have received FDA approval Manufacturing of LAI involves many steps with their unique challenges which is why pharmaceutical companies consider them to be complex formulations to develop Most of the published papers and books in this field are written by scientists who never worked in industry and whose knowledge on the topic is limited to small scale formulation screening Therefore this book aims to address the challenges of the development of biodegradable LAI from an industrial perspective **SPEC -**
