Logical Foundations For Rule Based Systems Studies In Computational Intelligence:

Logical Foundations for Rule-Based Systems Antoni Ligeza, 2006-01-25 Thinking in terms of facts and rules is perhaps one of the most common ways of approaching problem definition and problem solving both in everyday life and under more formal circumstances The best known set of rules the Ten Commandments have been accompanying us since the times of Moses the Decalogue proved to be simple but powerful concise and universal It is logically consistent and complete There are also many other attempts to impose rule based regulations in almost all areas of life including professional work education medical services taxes etc Some most typical examples may include various codes e g legal or traffic code regulations especially military ones and many systems of customary or informal rules The universal nature of rule based formulation of behavior or inference principles follows from the concept of rules being a simple and intuitive yet powerful concept of very high expressive power Moreover rules as such encode in fact functional aspects of behavior and can be used for modeling numerous phenomena

Logical Foundations for Rule-Based Systems Antoni Ligeza, 2006-01-10 The book presents logical foundations for rule based systems An attempt has been made to provide an in depth discussion of logical and other aspects of such systems including languages for knowledge representation inference mechanisms inference control design and verification The ultimate goal was to provide a deeper theoretical insight into the nature of rule based systems and put together the most complete presentation including details so frequently skipped in typical textbooks The book may be useful to potentially wide audience but it is aimed at providing specific knowledge for graduate post graduate and Ph D students as well as knowledge engineers and research workers involved in the domain of AI It also constitutes a summary of the Author's research and experience gathered through several years of his research work

Gero, 2019-01-07 This is the proceedings of the Eighth International Conference on Design Computing and Cognition DCC 18 held at the Polytecnico di Milano in Italy This volume presents both advances in theory and applications and demonstrates the depth and breadth of design computing and design cognition Design thinking the label given to the acts of designing has become a paradigmatic view that has transcended the discipline of design and is now widely used in business and elsewhere As a consequence there is an increasing interest in design research This volume contains papers that represent the state of the art research and developments in design computing and design cognition This book is of particular interest to researchers developers and users of advanced computation in design and those who need to gain a better understanding of designing that can be obtained through empirical studies *Logical Tools for Modelling Legal Argument* H. Prakken, 2013-04-17 This book is a revised and extended version of my PhD Thesis Logical Tools for Modelling Legal Argument which I defended on 14 January 1993 at the Free University Amsterdam The first five chapters of the thesis have remained almost completely unchanged but the other chapters have undergone considerable revision and expansion Most importantly I have replaced the formal argument based system of the old Chapters 6 7 and 8 with a revised and extended system which I have developed during the last three years in collaboration with Giovanni Sartor Apart from some technical improvements the main additions to the old system are the enrichment of its language with a nonprovability

operator and the ability to formalise reasoning about preference criteria Moreover the new system has a very intuitive dialectical form as opposed to the rather unintuitive fixed point appearance of the old system Another important revision is the split of the old Chapter 9 into two new chapters The old Section 9.1 on related research has been updated and expanded into a whole chapter while the rest of the old chapter is now in revised form in Chapter 10 This chapter also contains two new contributions a detailed discussion of Gordon's Pleadings Game and a general description of a multi-layered overall view on the structure of argumentation comprising a logical dialectical procedural and strategic layer Finally in the revised conclusion I have paid more attention to the relevance of my investigations for legal philosophy and argumentation theory

Expert Systems Petrică Vizureanu, 2010-01-01 Expert systems represent a branch of artificial intelligence aiming to take the experience of human specialists and transfer it to a computer system The knowledge is stored in the computer which by an execution system inference engine is reasoning and derives specific conclusions for the problem The purpose of expert systems is to help and support user's reasoning but not by replacing human judgement In fact expert systems offer to the inexperienced user a solution when human experts are not available This book has 18 chapters and explains that the expert systems are products of artificial intelligence branch of computer science that seeks to develop intelligent programs What is remarkable for expert systems is the applicability area and solving of different issues in many fields of architecture archeology commerce trade education medicine to engineering systems production of goods and control diagnosis problems in many industrial branches
