Making Images with Mathematics Alexei Sourin, 2021-06-01 This textbook teaches readers how to turn geometry into an image on a computer screen This exciting journey begins in the schools of the ancient Greek philosophers and describes the major events that changed people's perception of geometry. The readers will learn how to see geometry and colors beyond simple mathematical formulas and how to represent geometric shapes transformations and motions by digital sampling of various mathematical functions Special multiplatform visualization software developed by the author will allow readers to explore the exciting world of visual immersive mathematics and the book software repository will provide a starting point for their own sophisticated visualization applications Making Images with Mathematics serves as a self contained text for a one semester computer graphics and visualization course for computer science and engineering students as well as a reference manual for researchers and developers Creative and Experimental Photography John Humphrey, 2022-04-29 More photos are taken than ever before but most are neglected and unused This book suggests new creative directions and explains how you can produce distinctive and exciting works of art Packed with technical advice and in depth practical detail it shows you how to use cameras and equipment for experimental photography There are ideas on how to develop a creative eye and a personal photographic style It explains when to use the rules of composition and when to break them and shows you how to create amazing pictures from everyday objects It provides inspiration ideas and techniques for making abstract and pattern pictures and using textures for artistic impact Finally it advises on using software to convert pictures to artwork and how to present art images for maximum effect Through step by step guides and stunning examples it also helps you create images that tell a personal story It s an essential guide to help you take photos that count not just click Newton's Method Applied to Two Quadratic Equations in \$\mathbb {C}^2\$ Viewed as a Global away **Dynamical System** John H. Hubbard, Peter Papadopol, 2008 The authors study the Newton map N mathbb C 2 rightarrow mathbb C 2 associated to two equations in two unknowns as a dynamical system They focus on the first non trivial case two simultaneous quadratics to intersect two conics In the first two chapters the authors prove among other things The Russakovksi Shiffman measure does not change the points of indeterminancy The lines joining pairs of roots are invariant and the Julia set of the restriction of N to such a line has under appropriate circumstances an invariant manifold which shares features of a stable manifold and a center manifold The main part of the article concerns the behavior of N at infinity To compactify mathbb C 2 in such a way that N extends to the compactification the authors must take the projective limit of an infinite sequence of blow ups The simultaneous presence of points of indeterminancy and of critical curves forces the authors to define a new kind of blow up the Farey blow up This construction is studied in its own right in chapter 4 where they show among others that the real oriented blow up of the Farey blow up has a topological structure reminiscent of the invariant tori of the KAM theorem They also show that the cohomology completed under the intersection inner product is
